Technical Support
The fastest way to get technical support for your VoIP product is to submit a VoIP Technical Support form at the following website:
http://support.cyberdata.net/

Phone: (831) 373-2601, Ext. 333
Email: support@cyberdata.net
Fax: (831) 373-4193
Company and product information is at www.cyberdata.net.
Revision Information

Revision 930622R, which corresponds to firmware version 7.3.0, was released on May 27, 2015, and has the following changes:

- Adds Section 2.3.1, “Ground Connection”
- Adds Section 2.3.2, “Line In”
- Adds Section 2.3.3, “Line Out”
- Adds Section 2.3.4, “Page Port Output Connections”
- Adds Section 2.3.6, “Line-In Adjustment Potentiometer”

Browsers Supported

The following browsers have been tested against firmware version 7.3.0:

- Internet Explorer (version: 10)
- Firefox (also called Mozilla Firefox) (version: 23.0.1 and 25.0)
- Chrome (version: 29.0.1547.66 m)
- Safari (version: 5.1.7)
**Pictorial Alert Icons**

<table>
<thead>
<tr>
<th>General Alert</th>
<th>Ground</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="General Alert Icon" /></td>
<td><img src="image" alt="Ground Icon" /></td>
</tr>
</tbody>
</table>

**General Alert**

This pictorial alert indicates a potentially hazardous situation. This alert will be followed by a hazard level heading and more specific information about the hazard.

**Ground**

This pictorial alert indicates the Earth grounding connection point.

---

**Hazard Levels**

- **Danger**: Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury. This is limited to the most extreme situations.

- **Warning**: Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

- **Caution**: Indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury. It may also alert users against unsafe practices.

- **Notice**: Indicates a statement of company policy (that is, a safety policy or protection of property).

The safety guidelines for the equipment in this manual do not purport to address all the safety issues of the equipment. It is the responsibility of the user to establish appropriate safety, ergonomic, and health practices and determine the applicability of regulatory limitations prior to use. Potential safety hazards are identified in this manual through the use of words Danger, Warning, and Caution, the specific hazard type, and pictorial alert icons.
Important Safety Instructions

1. Read these instructions.
2. Keep these instructions.
3. Heed all warnings.
4. Follow all instructions.
5. Do not use this apparatus near water.
6. Clean only with dry cloth.
7. Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.
8. Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
9. Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10. Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
11. Only use attachments/accessories specified by the manufacturer.
12. Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
13. Prior to installation, consult local building and electrical code requirements.

**Warning**

*Electrical Hazard:* This product should be installed by a licensed electrician according to all local electrical and building codes.

**Warning**

*Electrical Hazard:* To prevent injury, this apparatus must be securely attached to the floor/wall in accordance with the installation instructions.

**Warning**

The PoE connector is intended for intra-building connections only and does not route to the outside plant.

1 Product Overview

The CyberData SIP Paging Adapter is a VoIP endpoint that interfaces analog paging systems with SIP and Multicast-based audio sources.

The SIP Paging Adapter (SPA) can be configured to support two separate SIP extensions. SIP extension one passes audio through to the analog output spoken from the caller's handset.

When called, SIP extension two plays a bell audio that can be used as a night ringer when configured in a night ring group.

The SPA supports up to 9 user-uploadable messages that can be played by a DTMF command.

The SPA supports a line-In input for playing background music. During a page or night ring, this input is muted with its output restored once the page has stopped.
1.1 How to Identify This Product

To identify the SIP Paging Adapter, look for a model number label similar to the one shown in Figure 1-1. The model number on the label should be 011233.

Figure 1-1. Model Number Label
1.2 Product features

- Two SIP extensions
- SIP RFC 3261
- Two SIP endpoints (one for Night Ringer)
- Menu system to allow for live pages or playing pre-recorded audio
- RTP Version 2 Multicast and Unicast
- Polycom group paging
- 10k Ohm line out and 600 Ohm connectors for interfacing with analog amplifiers
- Audio Codecs
  - G.711 U-law
  - G.711 A-law
  - Speex
  - DTMF detection (via RFC 2833)
- Cisco SRST support
- 802.11Q VLAN support
- Ability to import and export configuration
- Autoprovisioning
- Support for NTP server for time keeping
  - TFTP or HTTP
  - Update at certain times of day
  - Update after a certain amount of idle time
- HTTP command interface
- Remote amp fault sensor
- Web-based configuration and firmware upload
- User uploadable audio files
- PoE 802.3af enabled (Power-over-Ethernet)
- 19-inch Rack mount option

---

1. One of these extensions is a dedicated "night ringer," which is not capable of answering a call, and will only play a stored message while the call is ringing.
## 1.3 Product Specifications

### Line In:
- **Input Signal Amplitudes**: 2.0 VPP maximum
- **Input Impedance**: 10k Ohm

### Line Out:
- **Output Signal Amplitudes**: 2.0 VPP maximum
- **Output Level**: +2dBm nominal
- **Total Harmonic Distortion**: 0.5% maximum
- **Output Impedance**: 10k Ohm

- **Dimensions**: 6.11” L x 4.05” W x 1.15” H
- **Weight**: 1.2 pounds
- **Boxed Weight**: 1.8 pounds
- **Part Number**: 011233
2 Setting Up the SIP Paging Adapter

The topics in this chapter provide information on setting up, configuring, and using the SIP Paging Adapter.

2.1 Parts List

The packaging for the SIP Paging Adapter includes the parts in Table 2-2.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
2.2 Typical Installation

Figure 2-2 illustrates how the SIP Paging Adapter is normally installed as part of a paging system.

Figure 2-2. Typical Installation

![Diagram of SIP Paging Adapter installation](image-url)
2.3 Connecting the SIP Paging Adapter

Before you connect the SIP Paging Adapter, be sure that you have received all of the parts described in Section 2.1, "Parts List".

See Figure 2-3 for the connection options that are available for the SIP Paging Adapter.

Figure 2-3. Connection Options

2.3.1 Ground Connection

This connection allows you to connect the device to an electrical ground.

2.3.2 Line In

This RCA 10K Ohm Hi-Z input connection allows you to connect the device to The RCA line-out (10K Ohm Hi-Z) of an external audio amplifier. The level of this input can be controlled by the potentiometer located on the front of the device (see Section 2.6.9, "Configure the Fault Detection Parameters").

2.3.3 Line Out

This RCA 10K Ohm Hi-Z output connection allows you to connect the device to The RCA line-in (10K Ohm Hi-Z) of an external audio amplifier.
2.3.4 Page Port Output Connections

Table 2-1. Page Port Output Connections

<table>
<thead>
<tr>
<th>Pin</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pin 1</td>
<td>Fault Sense Input (Common). See Section 2.3.4.1, &quot;Pin 1 and 2—Fault Sense Input (Common/Sense)&quot;.</td>
</tr>
<tr>
<td>Pin 2</td>
<td>Fault Sense Input (Sense). See Section 2.3.4.1, &quot;Pin 1 and 2—Fault Sense Input (Common/Sense)&quot;.</td>
</tr>
<tr>
<td>Pin 3</td>
<td>Positive 600-Ohm Audio Output(^a). See Section 2.3.4.2, &quot;Pin 3, 4, and 5—Positive/Negative 600-Ohm Audio Output/Audio Ground Reference&quot;.</td>
</tr>
<tr>
<td>Pin 4</td>
<td>Negative 600-Ohm Audio Output(^a). See Section 2.3.4.2, &quot;Pin 3, 4, and 5—Positive/Negative 600-Ohm Audio Output/Audio Ground Reference&quot;.</td>
</tr>
<tr>
<td>Pin 5</td>
<td>Audio Ground Reference. See Section 2.3.4.2, &quot;Pin 3, 4, and 5—Positive/Negative 600-Ohm Audio Output/Audio Ground Reference&quot;.</td>
</tr>
<tr>
<td>Pin 6</td>
<td>Relay Contact - Common(^b). See Section 2.3.4.3, &quot;Pin 6 and 7—Relay Contact (Common/Normally Open)&quot;.</td>
</tr>
<tr>
<td>Pin 7</td>
<td>Relay Contact - Normally Open(^b). See Section 2.3.4.3, &quot;Pin 6 and 7—Relay Contact (Common/Normally Open)&quot;.</td>
</tr>
</tbody>
</table>

- \(^a\) The 600-Ohm audio output of the page port is also suited for interfaces with lower input impedances.
- \(^b\) 1 Amp at 30 VDC for continuous loads

2.3.4.1 Pin 1 and 2—Fault Sense Input (Common/Sense)

This input was designed as a method of monitoring an external amplifier that is equipped with a fault sense relay.

When enabled via the web interface (Section 2.6.9, "Configure the Fault Detection Parameters"), this input (when closed) will play a user upgradable audio file out of the line-out connection and/or place a SIP call to a pre-determined extension and play that file.

2.3.4.2 Pin 3, 4, and 5—Positive/Negative 600-Ohm Audio Output/Audio Ground Reference

This output allows direct connection to paging amplifiers requiring a "Page Port" type input that meets a balanced 600 Ohm 5VPP signal.

2.3.4.3 Pin 6 and 7—Relay Contact (Common/Normally Open)

When enabled on the web interface (Section 2.6.4, "Configure the Device Parameters"), every time an audio file is played out of the local line-out or 600 Ohm output, the relay will close, thereby enabling amplifiers with a remote turn-on capability to become active.
2.3.5 Removable Interface Connector

Figure 2-4 shows the interface connector that is removable on the SIP Paging Adapter.

**Figure 2-4. Removable Interface Connector**
2.3.6 Line-In Adjustment Potentiometer

Located on the front of the device is a line-in adjustment potentiometer (see Figure 2-5).

**Note** Make sure that you only use a non-metallic screwdriver to adjust the line-in gain with the potentiometer.

**Caution**

*Equipment Hazard:* Do not over torque the non-metallic screwdriver while adjusting the line-in gain with the potentiometer.

![Figure 2-5. Line-In Adjustment Potentiometer](image)

Line-in adjustment potentiometer on the front of the device
2.3.7 Connect to the Power Source

To use PoE, plug a Cat 5 Ethernet cable from the SIP Paging Adapter Ethernet port to your network. As an alternative to PoE, you can plug one end of a +48V DC power supply into the SIP Paging Adapter, and plug the other end into a receptacle. If required, connect the earth grounding wire to the chassis ground on the back of the unit. See Figure 2-6.

**Figure 2-6. Connecting to the Power Source**

<table>
<thead>
<tr>
<th>PoE</th>
<th>To set up the SIP Paging Adapter, connect the device to your network:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>PoE</td>
</tr>
<tr>
<td></td>
<td>• For PoE, plug one end of an 802.3af Ethernet cable into the SIP Paging Adapter Ethernet port. Plug the other end of the Ethernet cable into your network. See the figure on the left.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Non-PoE with 48 VDC Power Supply</th>
<th>Non-PoE</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• For Non-PoE, connect the SIP Paging Adapter to a 48VDC power supply.</td>
</tr>
<tr>
<td></td>
<td>• <strong>Note</strong>: Do not use both PoE and external power.</td>
</tr>
<tr>
<td></td>
<td>• Alternatively, you can use our part# 010867 PoE Power Injector as a cost-effective option.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Chassis Ground</th>

</tbody>
</table>
2.3.8 Connect to the Network

Plug one end of a standard Ethernet cable into the SIP Paging Adapter Ethernet port. Plug the other end into your network.

Figure 2-7. Connecting to the Network
2.3.9 Confirm that the SIP Paging Adapter is Up and Running

The LEDs on the front of the SIP Paging Adapter verify the unit’s operations.

Figure 2-8. SIP Paging Adapter LEDs

2.3.9.1 Confirm Power on, Network Connectivity, and Connection Speed

When you plug in the Ethernet cable or power supply:

- The **GREEN/BLUE Status** LED and the **GREEN Paging** LED both blink at a rate of 10 times per second during the initial network setup.

- The round, **GREEN/BLUE Status** LED on the front of the SIP Paging Adapter comes on indicating that the power is on. Once the device has been initialized, this LED blinks at one second intervals.

- The square, **GREEN/AMBER Link** LED above the Ethernet port indicates that the network connection has been established. The Link LED changes color to confirm the auto-negotiated connection speed:
  - The Link LED is **GREEN** at 10 Mbps.
  - The Link LED is **AMBER** at 100 Mbps.

- The **GREEN Paging** LED comes on after the device is booted and initialized. This LED blinks when a page is in progress. You can disable **Beep on Initialization** on the **Device Configuration** page.

2.3.9.2 Verify Network Activity

The square, **GREEN Activity** LED blinks when there is network traffic.
2.4 Announcing the IP Address

To announce the IP address for the SIP Paging Adapter, briefly press and then quickly release the RTFM switch. See Figure 2-9.

Note The IP address announcement can be heard if a speaker or amplified speaker is connected to the unit.

Figure 2-9. RTFM Switch
2.5 Restore the Factory Default Settings

The SIP Paging Adapter is delivered with factory set default values for the parameters in Table 2-3. Use the RTFM switch (see Figure 2-10) on the back of the unit to restore these parameters to the factory default settings.

Figure 2-10. RTFM Switch

Note When you perform this procedure, the factory default settings are restored. The default parameters for access are shown in Table 2-3.

Table 2-3. Factory Default Settings

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Factory Default Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>IP Addressing</td>

</tr>
<tr>
<td>Default Gateway(^a)</td>
<td>10.0.0.1</td>
</tr>
</tbody>
</table>

\(^a\) Default if there is not a DHCP server present.

To restore these parameters to the factory default settings:

1. Press and hold the RTFM switch until the status and paging lights come on.

2. Continue to press the switch until after the indicator lights go off, and then release it.

Note The “Restoring Defaults” announcement can be heard if a speaker or amplified speaker is connected to the unit.

3. The SIP Paging Adapter settings are restored to the factory defaults.
2.6 Configuring the SIP Paging Adapter

Use this section to configure the SIP Paging Adapter.

2.6.1 Gather the Required Configuration Information

Have the following information available before you configure the SIP Paging Adapter.

2.6.1.1 Static or DHCP Addressing?

Know whether your system uses static or dynamic (DHCP) IP addressing. If it uses static addressing, you also need to know the values to assign to the following SIP Paging Adapter parameters:

- IP Address
- Subnet Mask
- Default Gateway

2.6.1.2 Username and Password for Configuration GUI

Determine the Username and Password that will replace the defaults after you initially log in to the configuration GUI.

- The Username is case-sensitive, and must be from four to 25 alphanumeric characters long.
- The Password is case-sensitive, and must be from four to 20 alphanumeric characters long.

2.6.1.3 SIP Settings

To configure the SIP parameters, determine whether you want to register with the server. If you do, determine the number of minutes the registration lease remains valid, and whether you want to automatically unregister when you reboot. To configure the SIP parameters, you also need to determine the values for these parameters:

- SIP Server IP Address
- Remote and Local SIP Port Numbers
- SIP User ID, and Authenticate ID and Password for this User ID
2.6.2 SIP Paging Adapter Web Page Navigation

Table 2-4 shows the navigation buttons that you will see on every SIP Paging Adapter web page.

### Table 2-4. V3 Paging Amplifier Web Page Navigation

</tbody>
</table>
2.6.3 Log in to the Configuration GUI

1. Open your browser to the SIP Paging Adapter IP address.

   **Note** If the network does not have access to a DHCP server, the device will default to an IP address of 10.10.10.10.

   **Note** Make sure that the PC is on the same IP network as the SIP Paging Adapter.

   **Note** You may also download CyberData's VoIP Discovery Utility program which allows you to easily find and configure the default web address of the CyberData VoIP products.

   CyberData’s VoIP Discovery Utility program is available at the following website address:
   
   [http://www.cyberdata.net/support/voip/discovery_utility.html](http://www.cyberdata.net/support/voip/discovery_utility.html)

   The unit ships in DHCP mode. To get to the Home page, use the discovery utility to scan for the device on the network and open your browser from there.

   **Note** To work with the SIP Paging Adapter configuration after the initial configuration, log in using the IP address you assign to the device. Section 2.6.5, "Configure the Network Parameters" provides instructions for entering the IP address.

2. When prompted, use the following default **Username** and **Password** to open the configuration Home page:

   - **Username:** admin
   - **Password:** admin

   **Change the Default Username and Password**

   To change the default Web access Username and Password:

   1. Enter the new Username from four to 25 alphanumeric characters in the Change Username field. The Username is case-sensitive.

   2. Enter the new Password from four to 20 alphanumeric characters in the Change Password field. The Password is case-sensitive.

   3. Enter the new password again in the Re-enter New Password field. Click **Save Settings**.
Figure 2-11. Home Page
4. On the **Home Page**, review the setup details and navigation buttons described in Table 2-5.

### Table 2-5. Home Page Overview

</tbody>
</table>

- **Browse** button: Press the **Browse** button to select a configuration file to import.
- **Import Configuration** button: Press the **Import Configuration** button to save a board configuration to the board. **Note**: The board will have to be reset before changes will take effect.
- **Export Configuration** button: Press the **Export Configuration** button to download the current board configuration.
- **Save** button: Click the **Save** button to save your configuration settings. **Note**: You need to reboot for changes to take effect.
- **Reboot** button: Click on the **Reboot** button to reboot the system.
Note  You must click on the Save button and then the Reboot button for the changes to take effect.

At this point you can:

- Review the SIP Paging Adapter's Current Settings. Use the RTFM switch to restore the factory default settings. See Section 2.5, "Restore the Factory Default Settings".
- Configure the device parameters. Click on the Device Config button and see Section 2.6.4, "Configure the Device Parameters".
- Configure the network parameters. Click on the Networking button and refer to Section 2.6.5, "Configure the Network Parameters" for instructions.
- Configure the SIP parameters. Click on the SIP Config button and see Section 2.6.6, "Configure the SIP Parameters".
- Configure the multicast parameters. Click on the Multicast Config button and see Section 2.6.7, "Configure the Multicast Parameters" for instructions.
- Configure the Night Ringer parameters. Click on the Nightringer button and see Section 2.6.8, "Configure the Night Ringer Parameters".
- Configure the fault detection parameters. Click on the Fault Detection button and see Section 2.6.9, "Configure the Fault Detection Parameters".
- Configure the audio parameters. Click on the Audio Config button and see Section 2.6.10, "Configure the Audio Parameters" for instructions.
- Configure the event parameters. Click on the Event Config button and see Section 2.6.11, "Configure the Event Parameters" for instructions.
- Configure the autoprovisioning parameters. Click on the Autoprovisioning button and see Section 2.6.12, "Configure the Autoprovisioning Parameters" for instructions.

Note  Click on the Update Firmware button any time you need to upload new versions of the firmware. See Section 2.7, "Upgrading the Firmware" for instructions.
2.6.4 Configure the Device Parameters

1. Click on the **Device Configuration** button to open the **Device Configuration** page. See **Figure 2-12**.

**Figure 2-12. Device Configuration Page**
2. On the **Device Configuration** page, you may enter values for the parameters indicated in **Table 2-6**.

### Table 2-6. Device Configuration Parameters

<table>
<thead>
<tr>
<th>Web Page Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Miscellaneous Settings</strong></td>
<td></td>
</tr>
<tr>
<td>Beep on Initialization</td>
<td>When selected, you will hear a beep when the device initializes.</td>
</tr>
<tr>
<td>Beep on page</td>
<td>When selected, the device will play a beep before a page is sent to the analog ports when “Lineout” is enabled on a paging group (works for both buffered and live pages).</td>
</tr>
<tr>
<td>Enable Line In to Line Out Loopback</td>
<td>When selected, audio is sent from the line-in to the line-out output.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong>: Please be advised that when both Enable Line In to Line Out Loopback (on the <strong>Device Configuration Page</strong>) and Buffer SIP Calls (on the <strong>SIP Configuration Page</strong>) are enabled, the SIP Paging Adapter cannot pass DTMF tones.</td>
</tr>
<tr>
<td>Enable relay on local audio</td>
<td>When selected, the relay will be closed any time that audio is played out of the line-out/page port. This setting is for legacy analog amplifiers that are often connected to the page port. Analog amplifiers will often have a noticeable hum if they are turned on while there is no audio being played. The relay closure causes these amplifiers to turn on only when audio is sent to them.</td>
</tr>
<tr>
<td>DTMF duration (milliseconds)</td>
<td>Type the DTMF sound duration (in milliseconds).</td>
</tr>
<tr>
<td>Bypass DTMF Menus (Go straight to page)</td>
<td>When selected, the DTMF menu options are bypassed when a page is sent, and the device begins a live/buffered page (no ability to send stored messages).</td>
</tr>
<tr>
<td>Send pre-configured DTMF for Analog Zone</td>
<td>When selected, a pre-configured DTMF sequence is sent to activate an analog zone when the Bypass DTMF Menus (Go straight to page) setting is enabled.</td>
</tr>
<tr>
<td>Zone (field)</td>
<td>Type the pre-configured DTMF sequence for the analog zone.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong>: This setting is only enabled when the Send pre-configured DTMF for Analog Zone setting is enabled.</td>
</tr>
<tr>
<td>Manual DTMF Entry for Analog Zone</td>
<td>When selected, the device will prompt the caller to enter a DTMF sequence to activate an analog zone before prompting the caller to press 1 through 9 to send a stored message or press 0 to page.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong>: The user must press the # key after entering the zone.</td>
</tr>
<tr>
<td>Require Security Code</td>
<td>When selected, the user will be prompted to enter a Security Code (entered on this page) before being able to execute a page when calling the device.</td>
</tr>
<tr>
<td>Security Code</td>
<td>Type the security code in this field.</td>
</tr>
<tr>
<td><strong>Save</strong></td>
<td>Click the <strong>Save</strong> button to save your configuration settings.</td>
</tr>
<tr>
<td></td>
<td><strong>Note</strong>: You need to reboot for changes to take effect.</td>
</tr>
<tr>
<td><strong>Test Audio</strong></td>
<td>When the <strong>Test Audio</strong> button is pressed, you will hear a voice message for testing the device audio quality and volume.</td>
</tr>
<tr>
<td><strong>Test Relay</strong></td>
<td>Click on the <strong>Test Relay</strong> button to do a relay test.</td>
</tr>
<tr>
<td><strong>Reboot</strong></td>
<td>Click on the <strong>Reboot</strong> button to reboot the system.</td>
</tr>
</tbody>
</table>
**Note**  When **Send pre-configured DTMF for Analog Zone** or **Manual DTMF Entry for Analog Zone** is selected, the SIP Paging Adapter will send the DTMF tones to the line-out port, in addition to the analog amplifier connected to the Page Port Output. If secrecy or security of Analog Zone Codes is desired, CyberData recommends not connecting to the line-out port when these options are selected.

**Note**  You must click on the **Save** button and then the **Reboot** button for the changes to take effect.
2.6.5 Configure the Network Parameters

Configuring the network parameters enables your network to recognize the SIP Paging Adapter and communicate with it. Click on the **Networking** button to open the **Network Configuration** page.

**Figure 2-13. Network Configuration Page**
On the **Network Configuration** page, enter values for the parameters indicated in **Table 2-7**.

### Table 2-7. Network Configuration Parameters

<table>

<tr>
<td>DNS Server 2</td>
<td>Shows the current DNS Server 2 address.</td>
</tr>
</tbody>
</table>

**Note**: You must click on the **Save** button and then the **Reboot** button for the changes to take effect.
On this page:

1. Specify whether you use **Static** or **DHCP IP Addressing** by marking the appropriate radio button. Then, if you select Static, go to **Step 2**.

2. For Static IP Addressing, also enter values for the following parameters:
   - The SIP Paging Adapter’s **IP Address**: The SIP Paging Adapter is delivered with a factory default IP address. Change the default address to the correct IP address for your system.
   - The **Subnet Mask**.
   - The **Default Gateway**.

3. Click **Save** when you are finished.

4. Click **Reboot** for the new settings to take effect.
2.6.6 Configure the SIP Parameters

The SIP parameters enable the SIP Paging Adapter to contact and register with the SIP server. Click on the **SIP Config** button to open the **SIP Configuration** page.

**Figure 2-14. SIP Configuration Page**
5. On the **SIP Configuration** page, enter values for the parameters indicated in **Table 2-8**.

### Table 2-8. SIP Configuration Parameters

<tr>
<td>Register with a SIP Server</td>
<td>Enable or disable SIP Registration.</td>
</tr>
<tr>
<td>Re-registration Interval (in seconds)</td>
<td>Type the SIP Registration lease time in seconds (default is 60 minutes) (4 character limit [values from 30 to 3600]). Re-registration Interval (in seconds)</td>
</tr>
<tr>
<td>Unregister on Reboot</td>
<td>When selected, on boot, the device will first register with a SIP server with a expiration delay of 0 seconds. This has the effect of unregistering any current devices on this extension.</td>
</tr>
<tr>
<td>Disable rport Discovery</td>
<td>Prevents the device from including the public WAN IP address in the contact information sent to remote SIP servers. This will generally only need to be enabled when using an SBC in conjunction with a remote SIP server.</td>
</tr>
</tbody>
</table>
Setting Up the SIP Paging Adapter

Configure the SIP Parameters

1. Enter the IP address of the **SIP Server**.

2. Enter the port numbers used for SIP signaling:
   a. **Remote SIP Port**
   b. **Local SIP Port**

3. Enter the SIP registration parameters:
   a. **SIP User ID**
   b. **Authenticate ID**
   c. **Authenticate Password**

4. For **SIP Registration**, designate whether you want the SIP Paging Adapter to register with your SIP server.

5. At **Unregister on Reboot**:
   a. Select **Yes** to automatically unregister the SIP Paging Adapter when you reboot it.
   b. Select **No** to keep the SIP Paging Adapter registered when you reboot it.

6. In the **Register Expiration** field, enter the number of seconds the SIP Paging Adapter registration lease remains valid with the SIP Server. The SIP Paging Adapter automatically re-registers with the SIP server before the lease expiration timeout.

   **Note** You must click on the **Save** button and then the **Reboot** button for the changes to take effect.

---

Table 2-8. SIP Configuration Parameters (continued)

<table>
<thead>
<tr>
<th>Web Page Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Buffer SIP Calls</strong></td>
<td>When this is enabled, SIP calls to the device will be stored in memory and will play when either the call is terminated or the buffer is full. The receive buffer is 2MB in size and this is equal to about four minutes of ulaw encoded audio. <strong>Note</strong>: Please be advised that it is not possible to pass DTMF tones through the device when both <strong>Buffer SIP Calls</strong> (on the <strong>SIP Configuration Page</strong>) and <strong>Enable Line In to Line Out Loopback</strong> (on the <strong>Device Configuration Page</strong>) are enabled.</td>
</tr>
</tbody>
</table>

**Call Disconnection**

| Terminated call after delay (in seconds) | Type the desired number of seconds that you want to transpire after a connection delay before a call is terminated. **Note**: A value of 0 will disable this function. |

**Misc Settings**

| RTP Port (even) | Specify the port number used for the RTP stream after establishing a SIP call. This port number has to be an even number and defaults to 10500 (values from 2000 to 65534). **Note**: You need to reboot for changes to take effect. |

Click the **Save** button to save your configuration settings.

Click on the **Reboot** button to reboot the system.
2.6.7 Configure the Multicast Parameters

Multicast groups use multicasting to create public address paging zones. Multicasting is based on the concept of a group. Multicast addresses specify an arbitrary group of IP hosts that have joined the group and want to receive traffic sent to the group. Group members send IGMP messages to their local multicast routers, allowing the group traffic traversal from the source.

The Multicast Configuration page allows the device to join up to 10 paging zones for receiving ulaw/alaw encoded RTP audio streams. A paging zone can consist of one or many CyberData multicast group-enabled products. There is no limit to how many devices can be in a given paging zone. Each multicast group is defined by a multicast address and port number. Each multicast group is assigned a priority, allowing simultaneously arriving pages to be serviced based on importance. Multicast groups are compatible with IGMP through version three. The device supports simultaneous SIP and Multicast.

1. Click on the Multicast Configuration button to open the Multicast Configuration page. See Figure 2-15.

Figure 2-15. Multicast Configuration Page
2. On the **Multicast Configuration** page, enter values for the parameters indicated in Table 2-9.

### Table 2-9. Multicast Configuration Parameters

<tr>
<td>Polycom Emergency Channel</td>
<td>When an emergency Polycom channel/group number is selected, the SIP Paging Adapter will subscribe to the default channel for one-way group pages. Group Numbers 1-25 are supported. Or, select <strong>Disabled</strong> to disable this channel.</td>
</tr>
</tbody>
</table>

**Note**: You need to reboot for changes to take effect.

Click the **Save** button to save your configuration settings.

Click on the **Reboot** button to reboot the system.

**Note**: You must click on the **Save** button and then the **Reboot** button for the changes to take effect.
2.6.7.1 Assigning Priority

When playing multicast streams, audio on different streams will preempt each other according to their priority in the list. An audio stream with a higher priority will interrupt a stream with a lower priority.

If both SIP and Multicast is enabled, SIP audio streams are considered priority 4.5. SIP audio will interrupt multicast streams with priority 0 through 4 and will be interrupted by multicast streams with priority 5 through 9.

Note  SIP calls, multicast streams, ring tones, ringback tones, and nightring tones are all prioritized.

Ringtones and Nightringtones  Ringtones all play at the same priority level. This means that it is possible to have a nightring tone and a normal ringtone playing at the same time.

2.6.7.2 Polycom Paging

Page your entire paging infrastructure, including legacy analog paging systems, using Polycom IP phones and a CyberData SIP Paging Adapter. Simultaneously paging your IP phones and overhead speakers can be as simple as pressing the Paging soft key on a Polycom IP phone.

The Polycom Paging feature is supported on Polycom IP phones using UC Software 4.0.0 and higher. The Polycom paging feature operates in two modes: Push-to-Talk (PTT) and Group Paging. Only Group Paging mode pages are supported by the SIP Paging Adapter.

Polycom phones use the same multicast IP address and port number for both PTT and Group Paging multicasts. Make sure to note the Polycom multicast IP address and port number before configuring the CyberData SIP Paging Adapter. Polycom phones use a default multicast IP address of 224.0.1.116 and odd-numbered port 5001.

While the same multicast IP address and port number is used for all Polycom pages in both modes, Polycom uses numbered "groups" or "channels" to differentiate between each paging group. Each "group" or "channel" is numbered 1 through 25.

The SIP Paging Adapter can subscribe to Group Numbers 1 through 25 for Group Paging one-way audio pages. You may configure up to three group numbers or "channels", which are labeled Polycom Default Channel, Polycom Priority Channel, and Polycom Emergency Channel on the Multicast Configuration Page. Each of the three available channels can be disabled.

It is important to note the SIP Paging Adapter assigns a priority to each multicast group, as referenced in Section 2.6.7.2, "Polycom Paging". Polycom priority assignments by channel are ignored.

When configuring Polycom phones for their Group Paging feature, be sure the following settings are configured:

- Payload Size = 20 ms (milliseconds)
- Codec = G.711Mu

The SIP Paging Adapter supports Polycom Group Paging multicasts that are G.711Mu encoded with a payload size of 20 ms.

Use the following steps to configure Polycom Group Paging on the SIP Paging Adapter:

1. Identify the Polycom multicast IP address and port number used by the Polycom phones.
2. Check the box to **Enable Multicast Operation** on the **Multicast Configuration Page**.

3. Choose a priority group and enter the Polycom IP address and port number into the **Priority, Address, and Port** fields on the **Multicast Configuration Page**.

4. Select up to three channel/group numbers for Group Paging subscriptions at the bottom of the **Multicast Configuration Page**.

5. Save and reboot to store changes.
2.6.8 Configure the Night Ringer Parameters

1. Click on the **Nightringer** button to open the **Nightringer Configuration** page. See Figure 2-16.

Figure 2-16. Nightringer Configuration Page
2. On the **Night Ringer Configuration** page, enter values for the parameters indicated in **Table 2-10**.

### Table 2-10. Night Ringer Configuration Parameters

<td>Click on the <strong>Reboot</strong> button to reboot the system.</td>
</tr>
</tbody>
</table>

**Note** You must click on the **Save** button and then the **Reboot** button for the changes to take effect.
2.6.10 Configure the Audio Parameters

Click on the Audio Config button to open the Audio Configuration page. See Figure 2-18. The Audio Configuration page is used to add custom audio to the board. User uploaded audio will take precedence over the audio files shipped with the device.

*If repeat/infinite values are changed, device must be rebooted for those changes to take effect.*
On the **Audio Configuration** page, enter values for the parameters indicated in Table 2-12.

**Note** Each entry on the **Audio Configuration** page replaces one of the stock audio files on the board. When the input box displays the word **default**, the SIP Paging Adapter is using the stock audio file. If that file is replaced with a user file, it will display the uploaded filename.

The **Browse** button will allow you to navigate to and select an audio file.

The **Play** button will play that audio file.

The **Delete** button will delete any user uploaded audio and restore the stock audio file.

The **Save** button will download a new user audio file to the board once you've selected the file by using the **Choose File** button. The **Save** button will delete any pre-existing user-uploaded audio files.

Click on the **Reboot** button to reboot the system.

**Note** You must click on the **Save** button and then the **Reboot** button for the changes to take effect.
2.6.10.1 User-created Audio Files

User-created audio files must be saved in one of the following formats:

- RIFF (little-endian) data,
- WAVE audio, Microsoft PCM
- 16 bit, mono 8000 Hz

**Note** These audio format restrictions are enforced by the webpage.

You can use the free utility *Audacity* to convert audio files into this format. See Figure 2-23 through Figure 2-25.

*Figure 2-23. Audacity 1*

**Save**

Click on the Save button to save your configuration settings.

**Note:** You need to reboot for changes to take effect.

**Test Event**

Click on the Test Event button to test an event.

**Reboot**

Click on the Reboot button to reboot the system.

**Note** You must click on the Save button and then the Reboot button for the changes to take effect.
2.6.11.1 Example Packets for Events

The server and port are used to point to the listening server and the 'Remote Event Server URL' is the destination URL (typically the script running on the remote server that's used to parse and process the POST events).

**Note**  The XML is URL-encoded before transmission so the following examples are not completely accurate.

Here are example packets for every event:

```xml
POST xmlparse_engine HTTP/1.1

2.6.12 Configure the Autoprovisioning Parameters

1. Click on the Autoprovisioning button to open the Autoprovisioning Configuration page. See Figure 2-27.

Figure 2-27. Autoprovisioning Configuration Page
2. On the **Autoprosvisioning Configuration** page, you may enter values for the parameters indicated in Table 2-14.

### Table 2-14. Autoprosvisioning Configuration Parameters

<table>
<thead>
<tr>
<th>Web Page Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Autoprosvisioning</strong></td>
<td></td>
</tr>
<tr>
<td>Disable Autoprosvisioning</td>
<td>Prevent the device from automatically trying to download a configuration file. See Section 2.6.12.1, &quot;Autoprosvisioning&quot; for more information.</td>
</tr>
<tr>
<td>Autoprosvisioning Server</td>
<td>Enter the IPv4 address of the provisioning server in dotted decimal notation.</td>
</tr>
<tr>
<td>Autoprosvisioning Filename</td>
<td>The autoprosvisioning filename is the configuration filename. The default autoprosvisioning filename is in the format of <code>&lt;mac address&gt;.xml</code>. Supported filename extensions are .txt, and .xml. The current filename is denoted by an asterisk at the bottom of the Autoprosvisioning Configuration Page. Enter up to 256 characters. A file may have any name with an xml extension. If a file name is entered, the device will look for the specified file name, and only that file.</td>
</tr>
<tr>
<td>Use tftp</td>
<td>The device will use TFTP (instead of http) to download autoprosvisioning files.</td>
</tr>
<tr>
<td>Autoprosvisioning Autoupdate (in minutes)</td>
<td>The reoccurring time (in minutes) the device will wait before checking for new autoprosvisioning files. Enter up to 6 digits. A value of 0 will disable this option. <strong>Note:</strong> To use the auto update options, enable the Set Time with NTP Server on boot setting on the Device Configuration Page page (see Table 2-6).</td>
</tr>
<tr>
<td>Autoprosvisioning at time (HHMMSS)</td>
<td>The time of day the device will check for a new autoprosvisioning file. The time must be 6 characters in length and in HHMMSS format. An empty value will disable this option. <strong>Note:</strong> To use the auto update options, enable the Set Time with NTP Server on boot setting on the Device Configuration Page page (see Table 2-6).</td>
</tr>
<tr>
<td>Autoprosvisioning when idle (in minutes &gt; 10)</td>
<td>The idle time (in minutes greater than 10) after which the device will check for a new autoprosvisioning file. Enter up to 6 digits. A value of 0 will disable this option. <strong>Note:</strong> To use the auto update options, enable the Set Time with NTP Server on boot setting on the Device Configuration Page page (see Table 2-6).</td>
</tr>
<tr>
<td><strong>Clock</strong></td>
<td></td>
</tr>
<tr>
<td>NTP Server</td>
<td>Use this field to set the address (in IPv4 dotted decimal notation or as a canonical name) for the NTP Server. This field can accept canonical names of up to 64 characters in length.</td>
</tr>
</tbody>
</table>

Press the **Get Autoprosvisioning Template** button to create an autoprosvisioning file for this unit. See Section 2.6.12.3, "Get Autoprosvisioning Template Button"
2.6.12.1 Autoprovisioning

On boot, the device will look for an autoprovisioning server configured on the Autoprovisioning Configuration Page or specified as a DHCP option. When it finds a server, it will try to download the following (in order of preference):

1. The file configured on the autoprovisioning page.
2. A file named according to it’s mac address (for example: 0020f7350058.xml).
3. The file 000000cd.xml

The file can be hosted using a standard web server (like apache, IIS, or nginx), and the device can download over SSL. The file server can be an ipv4 address in dotted decimal notation or a fully qualified domain name.

By default, the device will get its autoprovisioning server from the DHCP options. See Section 2.6.12.2, “Sample dhcpcd.conf” for an example of how to configure dhcpcd to offer autoprovisioning server addresses. If multiple options are set, the device will attempt to download autoprovisioning files from every server.
The DHCP option determines the protocol used to download the autoprovisioning file. The device looks for DHCP options in the following order:

1. Option 43 - a FQDN or an IP address to an http server
2. Option 72 - an IP address to an http server
3. Option 150 - an IP address to a tftp server
4. Option 66 - an IP address to a tftp server or if the entry starts with 'http', a FQDN to a http server.

You can download an autoprovisioning template file from the Autoprovisioning Configuration Page using the Download Template button (see Table 2-14). This file contains every configuration option that can be set on the board.

Autoprovisioning files can contain the whole configuration or a subset of this file. The first autoprovisioning file can also contain links to other autoprovisioning files.

The <MiscSettings> section contains some examples of additional autoprovisioning files:

```
<MiscSettings>
  <DeviceName>CyberData VoIP Intercom</DeviceName>
  <!--    <AutoprovFile>common.xml</AutoprovFile>-->  
  <!--    <AutoprovFile>sip_reg[macaddress].xml</AutoprovFile>-->  
  <!--    <AutoprovFile>audio[macaddress]</AutoprovFile>-->  
  <!--    <AutoprovFile>device[macaddress].xml</AutoprovFile>-->  
</MiscSettings>
```

After downloading the first autoprovisioning file, the device will step through up to twenty additional <AutoprovFile> entries and try to download these files from the same server.

When the device finds a filename with the string [macaddress], it will replace this string with the mac address.

As an example, the user has configured option 43 on their DHCP server to “http://example.com,” and on their server, they have a file named 0020f7123456.xml (the same as the mac address of the device).
The file 0020f7123456.xml contains:
```xml
<?xml version="1.0" encoding="utf-8" ?>
<specific>
  <MiscSettings>
    <DeviceName>Newname</DeviceName>
    <AutoprovFile>common.xml</AutoprovFile>
    <AutoprovFile>sip_reg[macaddress].xml</AutoprovFile>
    <AutoprovFile>audio[macaddress]</AutoprovFile>
    <AutoprovFile>device.xml</AutoprovFile>
  </MiscSettings>
</specific>
```

1. The device will first set its name to 'Newname'.
2. It will try to download http://example.com/common.xml.
3. It will try to download http://example.com/sip_reg0020f7123456.xml.
4. It will try to download http://example.com/audio0020f7123456.
5. It will try to download http://example.com/device.xml.

The device is reconfigured every time it downloads a new file so if two files configure the same option the last one will be the one that is saved.

It is possible to autoprovision autoprovisioning values (for example, to disable autoprovisioning or to configure a time to check for new files).

The device will always check for an autoprovisioning files on boot but it can be configured to also check after a periodic delay, when idle, or at a specified time. When one of these options is set, the device will download its autoprovisioning files again, and if it finds any differences from the files it downloaded on boot, it will force a reboot and reconfigure.
The autoprovisioning filename can contain a file, a file path, or a directory.

Table 2-15. Autoprovisioning File Name

<table>
<thead>
<tr>
<th>Autoprovisioning Filename</th>
<th>Autoprovisioning Server</th>
<th>File Downloaded</th>
</tr>
</thead>
<tbody>
<tr>
<td>config.xml</td>
<td>10.0.1.3</td>
<td>10.0.1.3/config.xml</td>
</tr>
<tr>
<td>/path/to/config.xml</td>
<td>10.0.1.3</td>
<td>10.0.1.3/path/to/config.xml</td>
</tr>
<tr>
<td>subdirectory/path/</td>
<td>10.0.1.3</td>
<td>10.0.1.3/subdirectory/path/0020f7020002.xml</td>
</tr>
</tbody>
</table>

TFTP options may not support subdirectories. If a directory is set in the filename field, firmware and audio files will also be downloaded from this subdirectory.

If the filename ends with a forward slash "/," the device will treat it as a subdirectory.

For example:

The autoprovisioning server is set to "https://www.example.com"

The autoprovisioning filename is set to "cyberdata/"

On boot, the device will try to download:

https://www.example.com/cyberdata/0020f7123456.xml

...and if this fails:

https://www.example.com/cyberdata/000000cd.xml

Audio files and firmware files will also add "cyberdata" to the URL before downloading.
In the `<FirmwareSettings>` section, the `<FirmwareServer>` element can be used to specify a different server for hosting firmware files. When this element is not available, the device will try to download the file from the autoprovisioning server.

The device will use the filename to determine when to autoprovision firmware updates. The default configuration is blank, so the first time you set a value in your autoprovisioning file, it may force a firmware update even if the firmware version has not changed.

The `<FirmwareFile>` name can contain path elements (i.e. `/path/to/firmware/10.3.0-uImage-[device_file_name]`).

The device also supports product strings for downloading firmware. If the `<FirmwareFile>` option is not set, the device will look for its particular product string for a firmware filename. In this way, a generic autoprovisioning file can specify unique firmware for a range of products.

The list of valid product strings:

- `<ProductString>CallButton31</ProductString>`
- `<ProductString>EmergencyIntercom31</ProductString>`
- `<ProductString>EmergencyIntercom31SW</ProductString>`
- `<ProductString>IndoorIntercom31</ProductString>`
- `<ProductString>IndoorIntercom31SW</ProductString>`
- `<ProductString>IndoorKeypad31</ProductString>`
- `<ProductString>IndoorKeypad31SW</ProductString>`
- `<ProductString>OfficeRinger31</ProductString>`
- `<ProductString>OfficeRinger31SW</ProductString>`
- `<ProductString>OutdoorIntercom31</ProductString>`
- `<ProductString>OutdoorIntercom31SW</ProductString>`
- `<ProductString>OutdoorKeypad31</ProductString>`
- `<ProductString>OutdoorKeypad31SW</ProductString>`
- `<ProductString>Strobe31</ProductString>`
- `<ProductString>Strobe31SW</ProductString>`
Here's a simple example using four autoprovisioning files to configure two devices:

We boot up two devices with mac addresses **00:20:f7:02:00:01** and **00:20:f7:02:00:02** (Device1 and Device2).

The devices are set to use DHCP and that server provides an autoprovisioning server address with option 43. The address is “https://autoprovtest.server.net.” The files on this server are as follows:

**000000cd.xml**

```xml
<MiscSettings>
  <DeviceName>CyberData Autoprovisioned</DeviceName>
  <AutoprovFile>sip_common.xml</AutoprovFile>
  <AutoprovFile>sip_{macaddress}.xml</AutoprovFile>
</MiscSettings>
```

**sip_common.xml**

```xml
<SIPSettings>
  <SIPServer>10.0.0.253</SIPServer>
  <RemoteSIPPort>5060</RemoteSIPPort>
</SIPSettings>
```

**sip_0020f7020001.xml**

```xml
<SIPSettings>
  <SIPUserID>198</SIPUserID>
  <SIPAuthPassword>ext198</SIPAuthPassword>
  <DialoutExtension0>204</DialoutExtension0>
</SIPSettings>
```

**sip_0020f7020002.xml**

```xml
<SIPSettings>
  <SIPUserID>500</SIPUserID>
  <SIPAuthPassword>ext500</SIPAuthPassword>
  <DialoutExtension0>555</DialoutExtension0>
</SIPSettings>
```

On boot, Device1 tries to fetch the file **0020f7023614.xml** from “https://autoprovtest.server.net”. This file is not available, so device1 then tries to fetch the file **000000cd.xml**. This file exists, and Device1 parses the three elements.

1. Device1 changes its device name to **CyberData Autoprovisioned**.

2. Device1 finds an AutoprovFile element containing the filename **sip_common.xml**. The device downloads **sip_common.xml** from “https://autoprovtest.server.net,” and imports this configuration, setting the sip server to **10.0.0.253** and the remote port to **5060.3**.

3. Device1 finds another AutoprovFile element containing the filename **sip_{macaddress}.xml**. The device replaces the [macaddress] with its own mac address value creating **sip_0020f7020001.xml**, downloads this file from “https://autoprovtest.server.net,” and imports this configuration. This sets the user ID to **198**, the password to **ext198**, and the dialout extension to **204**. Device1 is now finished with autoprovisioning.
Device2 goes through the same steps by setting its device name to **CyberData Autoprovisioned**, its SIP server to **10.0.0.253**, and its port to **5060**. When Device2 “sees” `sip_[macaddress].xml`, Device2 replaces it with its own mac address and downloads `sip_0020f7020002.xml` from “https://autoprovtest.server.net.” Device2 sets the SIP User ID to **500**, the password to **ext500**, and the dialout extension to **555**.

### Autoprovisioning Example 2

Here is another example of setting up your autoprovisioning files:

We boot up two devices with mac addresses **00:20:f7:02:00:01** and **00:20:f7:02:00:02** (Device1 and Device2) and boot them on a network with a DHCP server configured with an autoprovisioning server at **10.0.1.3** on option **150**. Our TFTP server has three files:

- **0020f7020001.xml**

  ```xml
  <MiscSettings>
  <AutoprovFile>common_settings.xml</AutoprovFile>
  </MiscSettings>
  <SIPSettings>
  <SIPUserID>198</SIPUserID>
  <SIPAuthPassword>ext198</SIPAuthPassword>
  <DialoutExtension0>204</DialoutExtension0>
  </SIPSettings>
  
  **0020f7020002.xml**

  ```xml
  <MiscSettings>
  <AutoprovFile>common_settings.xml</AutoprovFile>
  </MiscSettings>
  <SIPSettings>
  <SIPUserID>500</SIPUserID>
  <SIPAuthPassword>ext500</SIPAuthPassword>
  <DialoutExtension0>555</DialoutExtension0>
  </SIPSettings>

  **common_settings.xml**

  ```xml
  <MiscSettings>
  <DeviceName>CyberData Autoprovisioned</DeviceName>
  </MiscSettings>
  <SIPSettings>
  <SIPServer>10.0.0.253</SIPServer>
  <RemoteSIPPort>5060</RemoteSIPPort>
  </SIPSettings>
  
  1. On boot, Device1 downloads **0020f7020001.xml** from **10.0.1.3** and imports these values. The SIP User ID is **198**, the password is **ext198**, and the dialout extension is **204**.

  2. Device1 then gets the filename **common_settings.xml** from the AutoprovFile element and downloads this file from the TFTP server at **10.0.1.3**. and imports these settings. The device name is set to **CyberData Autoprovisioned**, the SIP server is set to **10.0.0.253**, and the port is set to **5060**.

Device2 does the same except it downloads **0020f7020002.xml** on boot and imports these values instead. The Sip User ID is **500**, password is **ext500**, and dialout extension is **555**. Device2 then downloads the **common_settings.xml** file and imports those values. The device name is set to **CyberData Autoprovisioned**, the SIP server is set to **10.0.0.253**, and the port is set to **5060**.
XML Files

XML files can contain `<AutoprovFile>` elements. If multiple DHCP options are specified, the device will try to download autoprovisioning files from each in turn. The device will only look for `<AutoprovFile>` elements in the first file downloaded from each server. You can specify up to 20 `<AutoprovFile>` elements in the first autoprovisioning file.

There are numerous ways to change an element of the configuration(xml) file. Using sip ext as an example, the extension can be changed:

Within the device-specific xml, i.e. `[macaddress].xml`, via the AutoprovFile element: `<SIPSettings>/<SIPExt>`

From the device specific xml, a pointer to a sip_common file

From the device specific xml, a pointer to the device specific sip_[macaddress].xml

From the common file, a pointer to sip_common.xml

From the common file, a pointer to the device specific (sip_[macaddress].xml)

Audio Files

Audio files are stored in non-volatile memory and an autoprovisioned audio file will only have to be downloaded once for each device. Loading many audio files to the device from the web page could cause it to appear unresponsive. If this happens, wait until the transfer is complete and then refresh the page.

The device uses the file name to determine when to download a new audio file. This means that if you used autoprovisioning to upload a file and then changed the contents of this file at the TFTP server, the device will not recognize that the file has changed (because the file name is the same).

Since audio files are stored in non-volatile memory, if autoprovisioning is disabled after they have been loaded to the board, the audio file settings will not change. You can force a change to the audio files on the board by clicking Restore Default on the Audio Configuration page or by changing the autoprovisioning file with “default” set as the file name.
Sample dhcpd.conf

```
#
# Sample configuration file for ISC dhcpd for Debian
#

ddns-update-style none;

option domain-name "voiplab";
option domain-name-servers 10.0.0.252;
option option-150 code 150 = ip-address;
option ntp-servers north-america.pool.ntp.org;
option space VendorInfo;
option VendorInfo.text code 10 = { text };
authoritative;
log-facility local7;

subnet 10.0.0.0 netmask 255.0.0.0 {
    max-lease-time 3600;
    default-lease-time 3600;

    option routers                  10.0.0.1;
    option subnet-mask              255.0.0.0;

    option domain-name              "voiplab";
    option domain-name-servers      10.0.0.252;

    option time-offset              -8;             # Pacific Standard Time

    option www-server               99.99.99.99;            # OPTION 72

    option tftp-server-name         "10.0.1.52";           # OPTION 66
    option tftp-server-name         "http://test.cyberdata.net";    # OPTION 66

    option option-150              10.0.0.252;        # OPTION 150

    # These two lines are needed for option 43
    # vendor-option-space VendorInfo;
    # option VendorInfo.text "http://test.cyberdata.net";

    range 10.10.0.1 10.10.2.1; }
```
2.6.12.3 Get Autoprovisioning Template Button

The **Get Autoprovisioning Template** button allows the user to generate, download, edit, and then store an autoprovisioning template on the server that serves the autoprovisioning files for devices.

To generate an autoprovisioning template directly from the device, complete the following steps:

1. On the **Autoprovisioning** page, click on the **Get Autoprovisioning Template** button.

2. You will see a window prompting you to save a configuration file (.xml) to a location on your computer (Figure 2-28). The configuration file is the basis for the default configuration settings for your unit).

3. Choose a location to save the configuration file and click on OK. See Figure 2-28.

![Figure 2-28. Configuration File](image)

4. At this point, you can open and edit the autoprovisioning template to change the configuration settings in the template for the unit.

5. You can then upload the autoprovisioning file to a TFTP or HTTP server where the file can be loaded onto other devices.
2.6.12.4 Time Zone Strings

The posix time zone string tells the internal date and time utilities how to handle daylight savings time for different time zones. Table 2-16 shows some common strings.

Table 2-16. Common Time Zone Strings

<table>
<thead>
<tr>
<th>Time Zone</th>
<th>Time Zone String</th>
</tr>
</thead>
<tbody>
<tr>
<td>US Pacific time</td>
<td>PST8PDT,M3.2.0/2:00:00,M11.1.0/2:00:00</td>
</tr>
<tr>
<td>US Mountain time</td>
<td>MST7MDT,M3.2.0/2:00:00,M11.1.0/2:00:00</td>
</tr>
<tr>
<td>US Eastern Time</td>
<td>EST5EDT,M3.2.0/2:00:00,M11.1.0/2:00:00</td>
</tr>
<tr>
<td>Phoenix Arizonab</td>
<td>MST7</td>
</tr>
<tr>
<td>US Central Time</td>
<td>CST6DST,M3.2.0/2:00:00,M11.1.0/2:00:00</td>
</tr>
</tbody>
</table>

a. Phoenix, Arizona does not use daylight savings time.

Table 2-17 shows a breakdown of the parts that constitute the following time zone string:

- **CST6DST,M3.2.0/2:00:00,M11.1.0/2:00:00**

Table 2-17. Time Zone String Parts

<table>
<thead>
<tr>
<th>Time Zone String Part</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>CST6CDT</td>
<td>The time zone offset from GMT and three character identifiers for the time zone.</td>
</tr>
<tr>
<td>CST</td>
<td>Central Standard Time</td>
</tr>
<tr>
<td>6</td>
<td>The (hour) offset from GMT/UTC</td>
</tr>
<tr>
<td>CDT</td>
<td>Central Daylight Time</td>
</tr>
<tr>
<td>M3.2.0/2:00:00</td>
<td>The date and time when daylight savings begins.</td>
</tr>
<tr>
<td>M3</td>
<td>The third month (March)</td>
</tr>
<tr>
<td>.2</td>
<td>The 2nd occurrence of the day (next item) in the month</td>
</tr>
<tr>
<td>.0</td>
<td>Sunday</td>
</tr>
<tr>
<td>/2:00:00</td>
<td>Time of day to change</td>
</tr>
<tr>
<td>M11.1.0/2:00:00</td>
<td>The date and time when daylight savings ends.</td>
</tr>
<tr>
<td>M11</td>
<td>The eleventh month (November)</td>
</tr>
<tr>
<td>.1</td>
<td>The 1st occurrence of the day (next item) in the month</td>
</tr>
<tr>
<td>.0</td>
<td>Sunday</td>
</tr>
<tr>
<td>/2:00:00</td>
<td>Time of day to change</td>
</tr>
</tbody>
</table>
Setting Up the SIP Paging Adapter
Configure the Autoprovisioning Parameters

Table 2-18 has some more examples of time zone strings.

<table>
<thead>
<tr>
<th>Time Zone</th>
<th>Time Zone String</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tokyo</td>
<td>IST-9</td>
</tr>
<tr>
<td>Berlin</td>
<td>CET-1MET,M3.5.0/1:00,M10.5.0/1:00</td>
</tr>
</tbody>
</table>

a. Tokyo does not use daylight savings time.
b. For Berlin, daylight savings time starts on the last Sunday in March at 01:00 UTC, and ends on the last Sunday in October at 01:00 UTC, and is one hour ahead of UTC.

Time Zone Identifier A user-definable three or four character time zone identifier (such as PST, EDT, IST, MUT, etc) is needed at the beginning of the posix time zone string to properly set the time. However, the specific letters or numbers used for the time zone identifier are not important and can be any three or four letter or number combination that is chosen by the user. However, the time zone identifier cannot be blank.

Figure 2-29. Three or Four Character Time Zone Identifier

You can also use the following URL when a certain time zone applies daylight savings time:

Table 2-19 has information about the GMT time in various time zones.

<table>
<thead>
<tr>
<th>Time Zone</th>
<th>City or Area Zone Crosses</th>
</tr>
</thead>
<tbody>
<tr>
<td>GMT-12</td>
<td>Eniwetok</td>
</tr>
<tr>
<td>GMT-11</td>
<td>Samoa</td>

2.7 Upgrading the Firmware

1. Click on the **Update Firmware** button to open the **Upgrade Firmware** page. See Figure 2-30.

   ![Upgrade Firmware Page](image)

   **Figure 2-30. Upgrade Firmware Page**

   Table 2-20 shows the web page items on the **Upgrade Firmware** page.

   **Table 2-20. Upgrade Firmware Parameters**

<table>
<thead>
<tr>
<th>Web Page Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>File Upload</strong></td>
<td></td>
</tr>
<tr>
<td>Firmware Version</td>
<td>Shows the current firmware version.</td>
</tr>
<tr>
<td>Please specify a file</td>
<td>Click on the <strong>Choose File</strong> button to navigate to the application firmware file that you want to upload.</td>
</tr>
<tr>
<td><img src="image" alt="Browse..." /></td>
<td>The <strong>Browse</strong> button will allow you to navigate to and select an application firmware file.</td>
</tr>
<tr>
<td><img src="image" alt="Submit" /></td>
<td>Click on the <strong>Submit</strong> button to automatically upload the selected firmware and reboot the system.</td>
</tr>
</tbody>
</table>
2.7.0.1 Upgrade the Firmware

To upload the firmware from your computer:

1. Retrieve the latest SIP Paging Adapter firmware from the SIP Paging Adapter Downloads page at:
   
   http://www.cyberdata.net/products/voip/legacyanalog/sippagingadapter/downloads.html

2. Unzip the SIP Paging Adapter version file. This file may contain the following:
   - Firmware file
   - Release notes

3. Log in to the SIP Paging Adapter home page as instructed in Section 2.6.3, "Log in to the Configuration GUI".

4. Click on the Update Firmware button to open the Upgrade Firmware page. See Figure 2-30.

5. Click Browse, and then navigate to the location of the SIP Paging Adapter firmware file.

6. Click Submit.

   **Note** This starts the upload process. Once the SIP Paging Adapter has uploaded the file, the Uploading Firmware countdown page appears, indicating that the firmware is being written to flash. The SIP Paging Adapter will automatically reboot when the upload is complete. When the countdown finishes, the Upgrade Firmware page will refresh. The uploaded firmware filename should be displayed in the system configuration (indicating successful upload and reboot).
2.7.1 Reboot the SIP Paging Adapter

To reboot a SIP Paging Adapter, log in to the web page as instructed in Section 2.6.3, "Log in to the Configuration GUI".

1. Click **Reboot** (Figure 2-31). A normal restart will occur.

![Figure 2-31. Home Page](image)
2.8 Command Interface

Some functions on the device can be activated using simple POST commands to the web interface. The examples in Table 2-21 use the free unix utility, **wget commands**. However, any program that can send HTTP POST commands to the device should work.

### 2.8.1 Command Interface Post Commands

The commands in Table 2-21 require an authenticated session (a valid username and password to work).

<table>
<thead>
<tr>
<th>Device Action</th>
<th>HTTP Post Commanda</th>
</tr>
</thead>
<tbody>
<tr>
<td>Test relay (fixed at 5 seconds)</td>
<td>wget --user admin --password admin --auth-no-challenge --quiet -O/dev/null &quot;<a href="http://10.0.3.71/cgi-bin/command.cgi">http://10.0.3.71/cgi-bin/command.cgi</a>&quot; --post-data &quot;test_relay=yes&quot;</td>
</tr>
<tr>
<td>Close relay indefinitely</td>

a. Type and enter all of each http POST command on one line.
b. This command will only stop the playback of stored audio messages.
Appendix A: Setting Up a TFTP Server

A.1 Set up a TFTP Server

Autoprovisioning requires a TFTP server for hosting the configuration file.

A.1.1 In a LINUX Environment

To set up a TFTP server on LINUX:

1. Create a directory dedicated to the TFTP server, and move the files to be uploaded to that directory.

2. Run the following command where /tftpboot/ is the path to the directory you created in Step 1: the directory that contains the files to be uploaded. For example:

   in.tftpd -l -s /tftpboot/your_directory_name

A.1.2 In a Windows Environment

You can find several options online for setting up a Windows TFTP server. This example explains how to use the Solarwinds freeware SIP Paging Adapter TFTP server, which you can download at:

   http://www.cyberdata.net/support/voip/solarwinds.html

To set up a TFTP server on Windows:

1. Install and start the software.

Make a note of the default directory name, and then move the firmware files to be uploaded to that directory.
Appendix B: Troubleshooting/Technical Support

B.1 Frequently Asked Questions (FAQ)

Go to the following URL to see CyberData’s list of frequently asked questions:

http://www.cyberdata.net/products/voip/legacyanalog/sippagingadapter/faqs.html

B.1.1 Documentation

The documentation for this product is released in an English language version only. You can download PDF copies of CyberData product documentation at:

http://www.cyberdata.net/products/voip/legacyanalog/sippagingadapter/docs.html
B.2 Contact Information

Contact

CyberData Corporation
3 Justin Court
Monterey, CA 93940 USA
www.CyberData.net
Phone: 800-CYBERDATA (800-292-3732)
Fax: 831-373-4193

Sales

Sales 831-373-2601 Extension 334

Technical Support

The fastest way to get technical support for your VoIP product is to submit a VoIP Technical Support form at the following website:

http://support.cyberdata.net/

The Support Form initiates a ticket which CyberData uses for tracking customer requests. Most importantly, the Support Form tells us which PBX system and software version that you are using, the make and model of the switch, and other important information. This information is essential for troubleshooting. Please also include as much detail as possible in the Comments section of the Support Form.

Phone: (831) 373-2601, Ext. 333
Email: support@cyberdata.net

Returned Materials Authorization

To return the product, contact the Returned Materials Authorization (RMA) department:

Phone: 831-373-2601, Extension 136
Email: RMA@CyberData.net

When returning a product to CyberData, an approved CyberData RMA number must be printed on the outside of the original shipping package. Also, RMA numbers require an active VoIP Technical Support ticket number. A product will not be accepted for return without an approved RMA number. Send the product, in its original package, to the following address:

CyberData Corporation
3 Justin Court
Monterey, CA 93940
Attention: RMA "your RMA number"

RMA Status Form

If you need to inquire about the repair status of your product(s), please use the CyberData RMA Status form at the following web address:

http://support.cyberdata.net/
B.3 Warranty

CyberData warrants its product against defects in material or workmanship for a period of two years from the date of purchase. Should the product fail Within Warranty, CyberData will repair or replace the product free of charge. This warranty includes all parts and labor.

Should the product fail Out of the Warranty period, a flat rate repair charge of one half of the purchase price of the product will be assessed. Repairs that are Within Warranty period but are damaged by improper installation, modification, or abuse are deemed Out of Warranty and will be charged at the Out of Warranty rate. A device is deemed Out of Warranty when its purchase date is longer than two years or when the device has been damaged due to human error during installation, modification, or abuse. A replacement unit will be offered at full cost if the device cannot be repaired.

End of Life Devices are included under this policy. End of Life devices are devices that are no longer produced or sold. Technical support is still available for these devices. However, no firmware revisions or updates will be provided. If an End of Life device cannot be repaired, the replacement offered may be the current version of the device.

Products shipped to CyberData, both within and out of warranty, are shipped at the expense of the customer. CyberData will pay return shipping charges for repaired products.

CyberData shall not under any circumstances be liable to any person for any special, incidental, indirect or consequential damages, including without limitation, damages resulting from use or malfunction of the products, loss of profits or revenues or costs of replacement goods, even if CyberData is informed in advance of the possibility of such damages.

B.3.1 Warranty & RMA Returns within the United States

If service is required, you must contact CyberData Technical Support prior to returning any products to CyberData. Our Technical Support staff will determine if your product should be returned to us for further inspection. If Technical Support determines that your product needs to be returned to CyberData, an RMA number will be issued to you at this point.

Your issued RMA number must be printed on the outside of the shipping box. No product will be accepted for return without an approved RMA number. The product in its original package should be sent to the following address:

CyberData Corporation
3 Justin Court.
Monterey, CA 93940
Attn: RMA "xxxxxx"

B.3.2 Warranty & RMA Returns outside of the United States

If you purchased your equipment through an authorized international distributor or reseller, please contact them directly for product repairs.
B.3.3 Spare in the Air Policy

CyberData now offers a *Spare in the Air* no wait policy for warranty returns within the United States and Canada. More information about the *Spare in the Air* policy is available at the following web address:

http://support.cyberdata.net/

B.3.4 Return and Restocking Policy

For our authorized distributors and resellers, please refer to your CyberData Service Agreement for information on our return guidelines and procedures.

For End Users, please contact the company that you purchased your equipment from for their return policy.

B.3.5 Warranty and RMA Returns Page

The most recent warranty and RMA information is available at the CyberData Warranty and RMA Returns Page at the following web address:

http://support.cyberdata.net/
