CyberData	Technical Support
The IP Endpoint Company	The fastest way to get technical support for your VoIP product is to submit a VoIP Technical Support form at the following website: http://support.cyberdata.net/
	Phone: (831) 373-2601, Ext. 333 Email: support@cyberdata.net Fax: (831) 373-4193 Company and product information is at www.cyberdata.net .

Revision Information

Revision 931532B, which corresponds to firmware version 1.1.0, was released on May 3, 2019 and has the following changes:

- Updates Figure 2-16, "Multicast Configuration Page"
- Updates Table 2-9, "Multicast Page Parameters"
- Adds Section A.3, "Disassembling the Speaker"

Browsers Supported

The following browsers have been tested against firmware version 1.1.0:

- Internet Explorer (version: 11)
- Firefox (also called Mozilla Firefox) (version: 62.0)
- Chrome (version: 63.0.3239.132)
- Safari (version: 12)
- Microsoft Edge (version: 42.17134.1.0)

Pictorial Alert Icons

GENERAL ALERT	General Alert This pictoral alert indicates a potentially hazardous situation. This alert will be followed by a hazard level heading and more specific information about the hazard.
	Ground This pictoral alert indicates the Earth grounding connection point.

Hazard Levels

Danger: Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury. This is limited to the most extreme situations.

Warning: Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

Caution: Indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury. It may also alert users against unsafe practices.

Notice: Indicates a statement of company policy (that is, a safety policy or protection of property).

The safety guidelines for the equipment in this manual do not purport to address all the safety issues of the equipment. It is the responsibility of the user to establish appropriate safety, ergonomic, and health practices and determine the applicability of regulatory limitations prior to use. Potential safety hazards are identified in this manual through the use of words Danger, Warning, and Caution, the specific hazard type, and pictorial alert icons.

Important Safety Instructions

- 1. Read these instructions.
- 2. Keep these instructions.
- 3. Heed all warnings.
- 4. Follow all instructions.
- 5. Do not use this apparatus near water.
- 6. Clean only with dry cloth.
- 7. Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.
- 8. Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
- 9. Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
- 10. Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
- 11. Only use attachments/accessories specified by the manufacturer.
- 12. Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
- 13. Prior to installation, consult local building and electrical code requirements.

14. WARNING: The Multicast Speaker enclosure is not rated for any AC voltages!

GENERAL ALERT	Warning <i>Electrical Hazard:</i> This product should be installed by a licensed electrician according to all local electrical and building codes.
GENERAL ALERT	Warning <i>Electrical Hazard:</i> To prevent injury, this apparatus must be securely attached to the floor/wall in accordance with the installation instructions.
GENERAL ALERT	Warning The PoE connector is intended for intra-building connections only and does not route to the outside plant.

Abbreviations and Terms

Abbreviation or Term	Definition
A-law	A standard companding algorithm, used in European digital communications systems to optimize, i.e., modify, the dynamic range of an analog signal for digitizing.
AVP	Audio Video Profile
Cat 5	TIA/EIA-568-B Category 5
DHCP	Dynamic Host Configuration Protocol
LAN	Local Area Network
LED	Light Emitting Diode
Mbps	Megabits per Second.
NTP	Network Time Protocol
PBX	Private Branch Exchange
PoE	Power over Ethernet (as per IEEE 802.3af standard)
RTFM	Reset Test Function Management
SIP	Session Initiated Protocol
u-law	A companding algorithm, primarily used in the digital telecommunication
UC	Unified Communications
VoIP	Voice over Internet Protocol

1 Product Overview

1.1 How to Identify This Product

To identify the Multicast Speaker, look for a model number label similar to the one shown in Figure 1-1. The model number on the label should be **011458**.

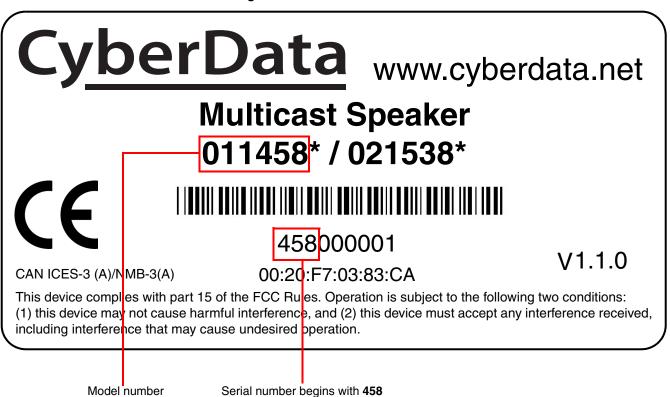

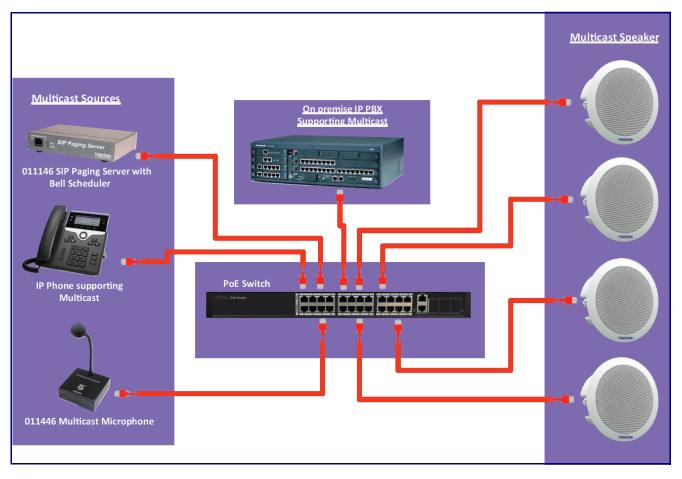

Figure 1-1. Model Number Label

1.2 Typical Configuration

Figure 1-2 shows a typical configuration for the Multicast Speaker.

1.3 Product Features

- Plays audio from multicast
- Paging prioritization and background music
- Support for 10 multicast paging groups
- Network-adjustable speaker volume
- User upgradeable firmware via web interface or autoprovisioning
- 802.11q VLAN tagging
- Configurable event generation for device health and status monitoring
- Web-based configuration
- High efficiency speaker driver
- Small footprint

1.4 Supported Protocols

The Multicast Speaker supports:

- Multicast
- HTTP Web-based configuration

Provides an intuitive user interface for easy system configuration and verification of speaker operations.

DHCP Client

Dynamically assigns IP addresses in addition to the option to use static addressing.

- HTTP TCP Post auto-updating event notification in XML format
- TFTP Client

Facilitates hosting for the configuration file for Autoprovisioning.

Audio Encodings

PCMU (G.711 µ-law)

PCMA (G.711 a-law)

G.729

1.5 Product Specifications

Table 1-1. Product Specifications

Category	Specification	
Audio Output	802.3af - SPL 105 dB @ 1 meter	
Operating Range	Temperature: -40° C to 55° C (-40° F to 131° F)	
	Humidity: 5-95%, non-condensing	
Storage Temperature	-40° C to 70° C (-40° F to 158° F)	
Storage Altitude	Up to 15,000 ft. (4573 m)	
Ethernet I/F	10/100 Mbps	
Protocol	Multicast	
Power Input	PoE 802.3af	
Payload types	G.711 a-law, G.711µ-law, and G.729	
Warranty	2 years limited	
Dimensions	9 in. [228.6 mm] x 2.4 in. [60.96 mm]	
Boxed Weight	4.0 lbs.	
Compliance	CE; EMC Directive - Class A EN 55032 & EN 55024, LV Safety Directive- EN 60950-1, RoHS Compliant, FCC; Part 15 Class A, Industry Canada; ICES-3 Class A, IEEE 802.3 Compliant	
Part number	011458	

1.6 Compliance

1.6.1 CE Testing

CE testing has been performed according to EN ISO/IEC 17050 for Emissions, Immunity, and Safety.

Note You can download the Declaration of Conformity document from the **Downloads** tab of the product's webpage.

1.6.2 FCC Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

2 Installing the Multicast Speaker

2.1 Parts List

Table 2-1 illustrates the parts for each speaker and includes kits for the drop ceiling and drywall mounting.

Note The installation template for the Multicast Speaker is located on the *Installation Quick Reference Guide* that is included in the packaging with each speaker.

Quantity	Part Name	Illustration
1	Multicast Speaker Assembly	S C C C C C C C C C C C C C C C C C C C
1	Installation Quick Reference Guide	CONTRACT CONTRACT CONTRACT CONTRACT

Table 2-1. Parts

2.2 Device Configuration

Set up and configure each speaker before you mount it.

CyberData delivers each speaker with the following factory default values:

Table 2-2. Factory Network Default Settings—Default of Network

Parameter	Factory Default Setting	
IP Addressing	DHCP	
IP Address ^a	10.10.10.10	
Web Access Username	admin	
Web Access Password	admin	
Subnet Mask ^a	255.0.0.0	
Default Gateway ^a	10.0.0.1	

a. Default if there is not a DHCP server present.

2.2.1 Connect Power to the Speaker

Figure 2-1 through Figure 2-2 illustrates how to connect power to the Multicast Speaker.

2.2.1.1 Multicast Speaker to a 802.3af Compliant PoE Switch

Figure 2-1 illustrates how to connect the Multicast Speaker to a 802.3af compliant PoE switch via a Cat 5 Ethernet cable.

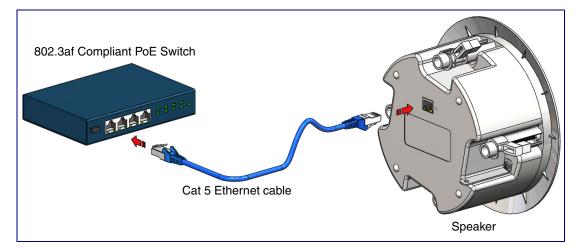

Figure 2-1. Multicast Speaker to a 802.3af Compliant PoE Switch

2.2.1.2 Multicast Speaker (with PoE Injector) to a 802.3af Compliant PoE Switch

In Figure 2-2, if a PoE switch is not available, you will need a PoE Injector, part #010867A (ordered separately). A PoE Injector is a power supply solution for those who have a standard Non PoE Switch.

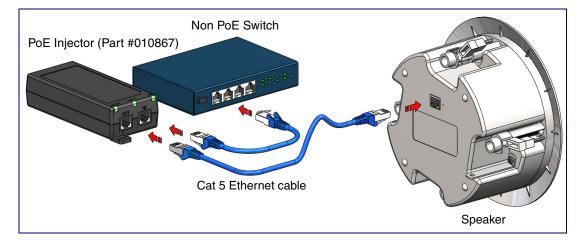

Figure 2-2. Multicast Speaker (with PoE Injector) to a Non PoE Switch

2.2.2 Confirm that the Speaker is Operational and Linked to the Network

After connecting the speaker to the 802.3af compliant Ethernet hub, the LEDs on the speaker face confirm that the speaker is operational and linked to the network.

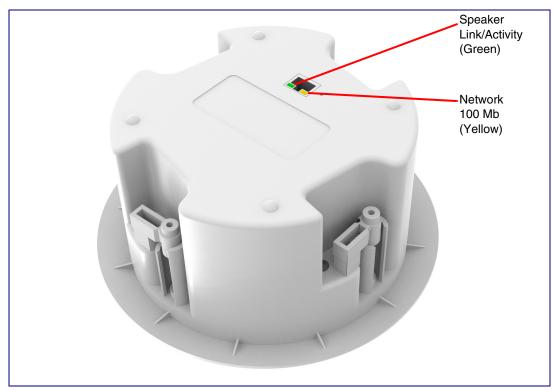

Figure 2-3. Status and Activity LEDs

2.2.2.1 Link/Activity LED

After supplying power to the speaker:

- 1. The green Link/Activity LED comes on immediately to show that there is a good network connection, and then blinks to show network activity.
- 2. After about 23 seconds with a static IP address (or 27 seconds if the board is set to use DHCP), the speaker should be ready.
- **Note** If the board is set to use DHCP and there is not a DHCP server available on the network, it will try 12 times with a three second delay between tries and eventually fall back to the programmed static IP address (by default 10.10.10.10). This process will take approximately 80 seconds.

2.2.2.2 100 Mb LED

 The yellow 100 Mb LED is illuminated when the network 100 Mb link to the speaker is established.

2.2.3 Confirm the IP Address and Test the Audio

2.2.3.1 Reset Test Function Management (RTFM) Button

When the speaker is operational and linked to the network, use the Reset Test Function Management (RTFM) button (Figure 2-4) on the speaker face to announce and confirm the speaker's IP Address and test that the audio is working.

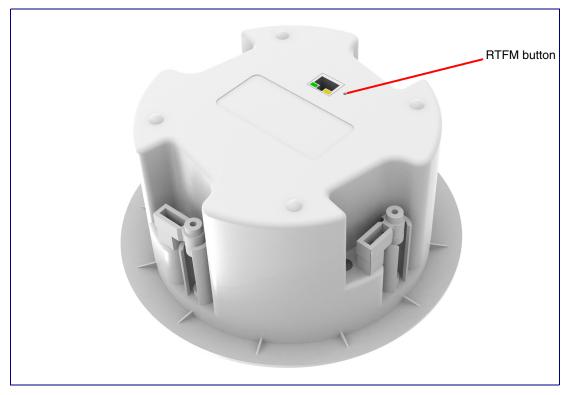

Figure 2-4. RTFM Button

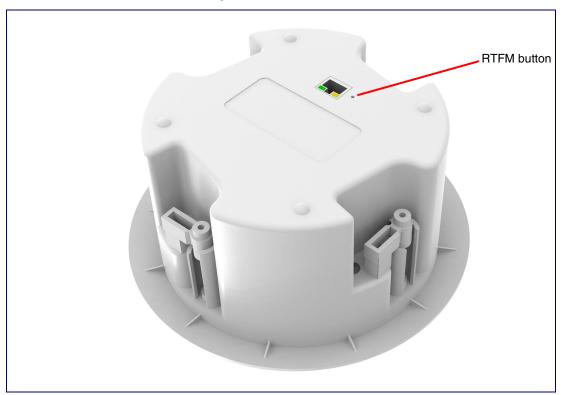

To announce a speaker's current IP address, use an instrument through the hole to press and release the RTFM button within a five second window.

- **Note** The speaker will use DHCP to obtain the new IP address (DHCP-assigned address or default to 10.10.10.10 if a DHCP server is not present).
- **Note** Pressing and holding the RTFM button for longer than five seconds will restore the speaker to the factory default settings.

2.2.4 How to Set the Factory Default Settings

2.2.4.1 RTFM Button

When the speaker is operational and linked to the network, use the Reset Test Function Management (RTFM) button (Figure 2-5) on the speaker face to set the factory default settings.

To set the factory default settings:

- 1. Press and hold the **RTFM** button for more than five seconds.
- 2. The speaker announces that it is restoring the factory default settings.
- **Note** The speaker will use DHCP to obtain the new IP address (DHCP-assigned address or default to 10.10.10.10 if a DHCP server is not present).

2.3 Configure the Multicast Speaker Parameters

To configure the Multicast Speaker online, use a standard web browser.

Configure each Multicast Speaker and verify its operation *before* you mount it. When you are ready to mount an Multicast Speaker, refer to Appendix A, "Mounting the Speaker" for instructions.

2.3.1 Factory Default Settings

All Multicast Speakers are initially configured with the following default IP settings:

When configuring more than one Multicast Speaker, attach the Multicast Speakers to the network and configure one at a time to avoid IP address conflicts.

Factory Default Setting
DHCP
10.10.10.10
admin
admin
255.0.0.0
10.0.0.1

Table 2-3. Factory Default Settings

a. Default if there is not a DHCP server present.

2.3.2 Multicast Speaker Web Page Navigation

Table 2-4 shows the navigation buttons that you will see on every Multicast Speaker web page.

Web Page Item	Description
Home	Link to the Home page.
Device	Link to the Device page.
Network	Link to the Network page.
SSL	Link to the SSL page.
Multicast	Link to the Multicast page.
Audiofiles	Link to the Audiofiles page.
Events	Link to the Events page.
Autoprov	Link to the Autoprovisioning page.
Firmware	Link to the Firmware page.

Table 2-4. Web Page Navigation

2.3.3 Using the Toggle Help Button

The **Toggle Help** button allows you to see a short description of some of the settings on the webpage. To use the **Toggle Help** button, do the following:

1. Click on the Toggle Help button that is on the UI webpage. See Figure 2-6 and Figure 2-7.

Figure 2-6. Toggle/Help Button

Toggle Help

2. You will see a question mark (?) appear next to each web page item that has been provided with a short description by the Help feature. See Figure 2-7.

Figure 2-7. Toggle Help Button and Question Marks

2.3.4 Log in to the Configuration Home Page

- 1. Open your browser to the Multicast Speaker IP address.
- **Note** If the network does not have access to a DHCP server, the device will default to an IP address of 10.10.10.10.
- Note Make sure that the PC is on the same IP network as the Multicast Speaker.
- **Note** You may also download CyberData's VoIP Discovery Utility program which allows you to easily find and configure the default web address of the CyberData VoIP products.

CyberData's VoIP Discovery Utility program is available at the following website address:

https://www.cyberdata.net/pages/discovery

- **Note** The device ships in DHCP mode. To get to the **Home** page, use the discovery utility to scan for the device on the network and open your browser from there.
- 2. When prompted, use the following default **Web Access Username** and **Web Access Password** to access the **Home Page** (Figure 2-9):

Web Access Username: admin

Web Access Password: admin

Figure 2-9. Home Page

- 3. On the Home page, review the setup details and navigation buttons described in Table 2-5.
- **Note** The question mark icon (?) in the following table shows which web page items will be defined after the **Toggle Help** button is pressed.

Table 2-5. Home Page Overview						
Web Page Item	Description					
Admin Settings						
Username ?	The username to access the web interface. Enter up to 25 characters.					
Password ?	The password to access the web interface. Enter up to 25 characters.					
Confirm Password ?	Confirm the web interface password.					
Current Status						
Serial Number	Shows the device serial number.					
Mac Address	Shows the device Mac address.					
Firmware Version	Shows the current firmware version.					
Partition 2	Contains a complete copy of bootable software.					
Partition 3	Contains an alternate, complete copy of bootable software.					
Booting From	Indicates the partition currently used for boot.					
Boot From Other Partition	Allows the user to boot from the alternate partition.					
IP Addressing	Shows the current IP addressing setting (DHCP or static).					
P Address	Shows the current IP address.					
Subnet Mask	Shows the current subnet mask address.					
Default Gateway	Shows the current default gateway address.					
DNS Server 1	Shows the current DNS Server 1 address.					
DNS Server 2	Shows the current DNS Server 2 address.					
Multicast Volume	Shows the current Multicast volume level.					
Event Reporting	Shows the current status of the Event Reporting mode.					
Import Settings						
Browse	Use this button to select a configuration file to import.					
Import Config	After selecting a configuration file, click Import to import the configuration from the selected file. Then, click Save and Reboot to store changes.					
Export Settings						
Export Config	Click Export to export the current configuration to a file.					
Save	Click the Save button to save your configuration settings.

	Move the mouse pointer to hover over a question mark to see a short description of a specific web page item.			

Table 2-5. Home Page Overview (continued)

2.3.5 Configure the Device

1. Click the **Device** menu button to open the **Device** page. See Figure 2-10.

Home	Device	Network	SSL	Multicast	Audiofiles	Events	Autoprov	Firmware		
CyberData Multicast Speaker										
Volume Settings (0-9) Multicast Volume: 4										
Clock Settings				N	Misc Settings					
Enable NTP: Image: Construction of the service of t										
Test Audio										

- 2. On the **Device** page, you may enter values for the parameters indicated in Table 2-6.
- **Note** The question mark icon (?) in the following table shows which web page items will be defined after the **Toggle Help** button is pressed.

Web Page Item	Description
Volume Settings (0-9)	
Multicast Volume ?	Set the speaker volume for multicast audio streams. A value of 0 will mute the speaker during multicasts.
	Note: You can change this setting without rebooting the device.
Clock Settings	
Enable NTP ?	Sync device's local time with the specified NTP Server.
NTP Server ?	Use this field to set the address (in IPv4 dotted decimal notation or as a canonical name) for the NTP Server. This field can accept canonical names of up to 64 characters in length.
Timezone	Enter the tz database string of your timezone.
	Examples:
	America/Los_Angeles
	America/New_York
	Europe/London
	America/Toronto
	See <u>https://en.wikipedia.org/wiki/List of tz database time zones</u> for a full list of valid strings.
Current Time	Displays the current time.
Misc Settings	
Device Name ?	Type the device name. Enter up to 25 characters.
Disable HTTPS (NOT recommended) ?	Disables the encrypted connection to the webpage. We do not recommend disabling HTTPS for security reasons.
Test Audio	Click on the Test Audio button to do an audio test. When the Test Audio button is pressed, you will hear a voice message for testing the device audio quality and volume.
Save	Click the Save button to save your configuration settings.
Reboot	Click on the Reboot button to reboot the system.
Toggle Help	Click on the Toggle Help button to see a short description of some of the web page items. First click on the Toggle Help button, and you will see a question mark (?) appear next to some of the web page items. Move the mouse pointer to hover over a question mark to see a short description of a specific web page item.

Table 2-6. Device Page Parameters

2.3.6 Configure the Network Parameters

1. Click the Network menu button to open the Network page (Figure 2-11).

Current Ne	twork Sett	ings			Save Reboot	Toggle Help		
Subnet Mask: 2 Default Gateway:1	0.10.1.91 55.0.00 0.0.0.1 0.0.1.56							

- 2. On the Network page, enter values for the parameters indicated in Table 2-7.
- **Note** The question mark icon (?) in the following table shows which web page items will be defined after the **Toggle Help** button is pressed.

Web Page Item	Description
Stored Network Settings	
Addressing Mode 🛜	Select either DHCP IP Addressing or Static Addressing by marking the appropriate radio button. DHCP Addressing mode is enabled on default and the device will attempt to resolve network addressing with the local DHCP server upon boot. If DHCP Addressing fails, the device will revert to the last known IP address or the factory default address if no prior DHCP lease was established. See Section 2.3.1, "Factory Default Settings" for factory default settings. Be sure to click Save and Reboot to store changes when configuring a Static address.
Hostname ?	This is the hostname provided by the DHCP server. See the DHCP/DNS server documentation for more information. Enter up to 64 characters.
IP Address ?	Enter the Static IPv4 network address in dotted decimal notation.
Subnet Mask ?	Enter the Subnet Mask in dotted decimal notation.
Default Gateway ?	Enter the Default Gateway IPv4 address in dotted decimal notation.
DNS Server 1 ?	Enter the primary DNS Server IPv4 address in dotted decimal notation.
DNS Server 2 ?	Enter the secondary DNS Server IPv4 address in dotted decimal notation.
Current Network Settings	Shows the current network settings.
IP Address	Shows the current Static IP address.
Subnet Mask	Shows the current Subnet Mask address.
Default Gateway	Shows the current Default Gateway address.
DNS Server 1	Shows the current DNS Server 1 address.
DNS Server 2	Shows the current DNS Server 2 address.
VLAN Settings	
VLAN ID (0-4095) ?	Specify the IEEE 802.1Q VLAN ID number. Enter up to 4 digits.
	Note : The device supports 802.1Q VLAN tagging support. The switch port connected to the device will need to be in "trunking mode" for the VLAN tags to propagate.
VLAN Priority (0-7) 🛜	Specify the IEEE 802.1p VLAN priority level. Enter 1 digit. A value of 0 may cause the VLAN ID tag to be ignored.
Save	Click the Save button to save your configuration settings.
Reboot	Click on the Reboot button to reboot the system.

Table 2-7. Network Configuration Parameters

Web Page Item	Description
Toggle Help	Click on the Toggle Help button to see a short description of some of the web page items. First click on the Toggle Help button, and you will see a question mark (?) appear next to some of the web page items. Move the mouse pointer to hover over a question mark to see a short description of a specific web page item.

Table 2-7. Network Configuration Parameters (continued)

Note You must click on the **Save** button and then the **Reboot** button for the changes to take effect.

2.3.7 Configure the SSL Parameters

1. Click **SSL** menu button to open the **SSL** page (Figure 2-12).

Figure 2-12. SSL Configuration Page

2.3.8 Configure the Multicast Parameters

The Multicast Configuration page allows the device to join up to ten paging zones for receiving ulaw/alaw encoded RTP audio streams.

A paging zone can consist of one or many CyberData multicast group-enabled products. There is no limit to how many speakers can be in a given paging zone. Each multicast group is defined by a multicast address and port number.

Each multicast group is assigned a priority, allowing simultaneously arriving pages to be serviced based on importance. Multicast groups are compatible with IGMP through version 3.

1. Click on the Multicast menu button to open the Multicast page. See Figure 2-16.

	Network	SSL	Multicast	Audiofiles	Events	Autoprov	Firmware
C	/berD	ata	Mul	ticast	t Spe	eaker

Figure 2-16. Multicast Configuration Page

- 2. On the Multicast page, enter values for the parameters indicated in Table 2-9.
- **Note** The question mark icon (?) in the following table shows which web page items will be defined after the **Toggle Help** button is pressed.

Web Page Item	Description						
Priority	Indicates the priority for the multicast group. Priority 9 is the highest (emergency streams). 0 is the lowest (background music).						
Address	Enter the multicast IP Address for this multicast group (15 character limit).						
Port	Enter the port number for this multicast group (5 character limit [range can be from 2000 to 65535]).						
	Note : The multicast ports have to be even values. The webpage will enforce this restriction.						
Name	Assign a descriptive name for this multicast group (25 character limit).						
Веер	When selected, the device will play a beep before multicast audio is sent.						
Polycom Default Channel	When a default Polycom channel/group number is selected, the device will subscribe to the default channel for one-way group pages. Group Numbers 1-25 are supported. Or, select Disabled to disable this channel.						
Polycom Priority Channel	When a priority Polycom channel/group number is selected, the device will subscribe to the priority channel for one-way group pages. Group Numbers 1-25 are supported. Or, select Disabled to disable this channel.						
Polycom Emergency Channel	When an emergency Polycom channel/group number is selected, the device will subscribe to the default channel for one-way group pages. Group Numbers 1-25 are supported. Or, select Disabled to disable this channel.						
Save	Click the Save button to save your configuration settings.						
Reboot	Click on the Reboot button to reboot the system.						
Toggle Help	Click on the Toggle Help button to see a short description of some of the web page items. First click on the Toggle Help button, and you will see a question mark (?) appear next to some of the web page items. Move the mouse pointer to hove over a question mark to see a short description of a specific web page item.						

Table 2-9. Multicast Page Parameters

2.3.9 Configure the Audio Configuration Parameters

The **Audiofiles** page is used to add custom audio to the board. User uploaded audio will take precedence over the audio files shipped with the device.

1. Click on the Audiofiles menu button to open the Audiofiles page (Figure 2-17).

Figure 2-17. Audiofiles Page

- 2. On the Audiofiles page, enter values for the parameters indicated in Table 2-10.
- **Note** The question mark icon (?) in the following table shows which web page items will be defined after the **Toggle Help** button is pressed.

Web Page Item	Description						
Available Space	Shows the space available for the user to save custom audio files if they want to change the message when the door or sensor is triggered.						
Audio Files							
0-9	The name of the audio configuration option is the same as the spoken audio that plays on the board (24 character limit).						
	'0' corresponds to the spoken word "zero."						
	'1' corresponds to the spoken word "one."						
	'2' corresponds to the spoken word "two."						
	'3' corresponds to the spoken word "three."						
	'4' corresponds to the spoken word "four."						
Dot	Corresponds to the spoken word "dot." (24 character limit)						
Audio Test	Corresponds to the message "This is the CyberData IP speaker test message" (24 character limit)						
Your IP Address is	Corresponds to the message "Your IP address is" (24 character limit).						
Rebooting	Corresponds to the spoken word "Rebooting" (24 character limit).						
Restoring Default	Corresponds to the message "Restoring default" (24 character limit).						
Browse	Click on the Browse button to navigate to and select an audio file.						
Play	The Play button will play that audio file.						
Delete	The Delete button will delete any user uploaded audio and restore the stock audio file.						
Save	The Save button will download a new user audio file to the board once you've selected the file by using the Browse button. The Save button will delete any pre-existing user-uploaded audio files.						

Table 2-10. Audiofiles Page Parameters

2.3.9.1 User-created Audio Files

User created audio files should be saved in the following format:

RIFF (little-endian) data, WAVE audio, Microsoft PCM, 16 bit, mono 8000 Hz

You can use the free utility *Audacity* to convert audio files into this format. See Figure 2-18 through Figure 2-20.

2.3.10 Configure the Events Parameters

The **Events** page specifies a remote server that can be used to receive HTTP POST events when actions take place on the board.

1. Click on the Events menu button to open the Events page (Figure 2-21).

Figure 2-21. Event Configuration Page

Home	Device	Network	SSL	Multicast	Audiofiles	Events	Autoprov	Firmware
	Cvl	berD	ata	Mult	icast	Spe	eaker

Save Rebo	oot Toggle Help							

- 2. On the Events page, enter values for the parameters indicated in Table 2-11.
- **Note** The question mark icon (?) in the following table shows which web page items will be defined after the **Toggle Help** button is pressed.

Web Page Item	Description
Enable Event Generation ?	The device will send HTTP POST events to the specified remote server and port number whenever a certain action takes place. Select an event type below to generate an HTTP POST event.
Events	
Enable Multicast Start Events 🛜	When selected, the device will report when the device starts playing a multicast audio stream.
Enable Multicast Stop Events 🛜	When selected, the device will report when the device stops playing a multicast audio stream.
Enable Power On Events ?	When selected, the device will report when it boots.
Enable 60 Second Heartbeat ?	When enabled, the device will report a Heartbeat event every 60 seconds. SIP registration is not required to generate Heartbeat events.
Event Server	
Server IP Address ?	The IPv4 address of the event server in dotted decimal notation.
Server Port ?	Specify the event server port number. The supported range is 0- 65536. Enter up to 5 digits.
Server URL 🛜	Generally, the destination URL is the name of the application that receives the events and the string in the HTTP POST command. It can be a script used to parse and process the HTTP POST events. Enter up to 127 characters.
Save	Click the Save button to save your configuration settings.
Reboot	Click on the Reboot button to reboot the system.
Toggle Help	Click on the Toggle Help button to see a short description of some of the web page items. First click on the Toggle Help button, and you will see a question mark (?) appear next to some of the web page items. Move the mouse pointer to hover over a question mark to see a short description of a specific web page item.

2.3.10.1 Example Packets for Events

The server and port are used to point to the listening server and the 'Remote Event Server URL' is the destination URL (typically the script running on the remote server that's used to parse and process the POST events).

Note The XML is URL-encoded before transmission so the following examples are not completely accurate.

Here are example packets for every event:

```

2.3.11 Configure the Autoprovisioning Parameters

Autoprovisioning can be used to automatically configure your device. The autoprovisioning file is an xml file with the device configuration. Values found in this file will override values stored in on-board memory.

Note By default, the device will try to set up its configuration with autoprovisioning.

1. Click the Autoprov menu button to open the Autoprovisioning page. See Figure 2-22.

- 2. On the **Autoprovisioning** page, you may enter values for the parameters indicated in Table 2-12.
- **Note** The question mark icon (?) in the following table shows which web page items will be defined after the **Toggle Help** button is pressed.

Web Page Item	Description
Enable Autoprovisioning ?	The device will automatically fetch a configuration file, also known as the 'autoprovisioning file', based on the configured settings below.
Autoprovisioning Server ?	Enter the IPv4 address of the provisioning server in dotted decimal notation.
Autoprovisioning Filename ?	The autoprovisioning filename is the configuration filename. The default autoprovisioning filename is in the format of <mac address="">.xml</mac> .
	Supported filename extensions are .txt, and .xml. The current filename is denoted by an asterisk at the bottom of the Autoprovisioning Page . Enter up to 256 characters.
	A file may have any name with an xml extension. If a file name is entered, the device will look for the specified file name, and only that file.
Use tftp ?	The device will use TFTP (instead of http) to download autoprovisioning files.
Verify Server Certificate ?	When using ssl to download autoprovisioning files, reject connections where the server address doesn't match the server certificate's common name.
Username ?	The username used to authenticate with an autoprovisioning server. Leave this field blank to disable authentication.
Password ?	The password used to authenticate with an autoprovisioning server. Leave this field blank to disable authentication.
Autoprovisioning Autoupdate (in minutes) ?	The reoccurring time (in minutes) the device will wait before checking for new autoprovisioning files. Enter up to 6 digits. A value of 0 will disable this option.
Autoprovision at time (HHMMSS) 🛜	The time of day the device will check for a new autoprovisioning file. The time must be 6 characters in length and in HHMMSS format. An empty value will disable this option.
Autoprovision when idle (in minutes > 10) ?	The idle time (in minutes greater than 10) after which the device will check for a new autoprovisioning file. Enter up to 6 digits. A value of 0 will disable this option.
Save	Click the Save button to save your configuration settings.
Reboot	Click on the Reboot button to reboot the system.
Toggle Help	Click on the Toggle Help button to see a short description of some of the web page items. First click on the Toggle Help button, and you will see a question mark (?) appear next to some of the web page items. Move the mouse pointer to hover over a question mark to see a short description of a specific web page item.
Download Template	Press the Download Template button to create an autoprovisioning file for the device. See Section 2.3.11.3, "Download Template Button"
Autoprovisioning log	The autoprovisioning log provides information about the latest autoprovisioning attempt (i.e. dhcp options and server accessed and files parsed or not found).

Table 2-12. Autoprovisioning Page Parameters

Note You must click on the Save button for the changes to take effect.

2.3.11.1 Autoprovisioning

On boot, the device will look for an autoprovisioning server configured on the Autoprovisioning Page or specified as a DHCP option. When it finds a server, it will try to download the following (in order of preference):

- 1. The file configured on the autoprovisioning page.
- 2. A file named according to it's mac address (for example: 0020f7350058.xml).
- 3. The file 000000cd.xml

The file can be hosted using a standard web server (like apache, IIS, or nginx), and the device can download over SSL. The file server can be an ipv4 address in dotted decimal notation or a fully qualified domain name.

By default, the device will get its autoprovisioning server from the DHCP options. See Section 2.3.11.2, "Sample dhcpd.conf" for an example of how to configure dhcpd to offer autoprovisioning server addresses. If multiple options are set, the device will attempt to download autoprovisioning files from every server.

The DHCP option determines the protocol used to download the autoprovisioning file. The device looks for DHCP options in the following order:

- 1. Option 43 a FQDN or an IP address to an http server
- 2. Option 72 an IP address to an http server
- 3. Option 150 an IP address to a tftp server
- 4. Option 66 an IP address to a tftp server or if the entry starts with 'http', a FQDN to a http server.

You can download an autoprovisioning template file from the Autoprovisioning Page using the **Download Template** button (see Table 2-12). This file contains every configuration option that can be set on the board.

Autoprovisioning files can contain the whole configuration or a subset of this file. The first autoprovisioning file can also contain links to other autoprovisioning files.

The <MiscSettings> section contains some examples of additional autoprovisioning files:

<m3< th=""><th>iscSettings></th></m3<>	iscSettings>
	<devicename>CyberData VoIP Device</devicename>
</td <td><autoprovfile>common.xml</autoprovfile>></td>	<autoprovfile>common.xml</autoprovfile> >
</td <td><autoprovfile>sip_reg[macaddress].xml</autoprovfile>></td>	<autoprovfile>sip_reg[macaddress].xml</autoprovfile> >
</td <td><autoprovfile>audio[macaddress]</autoprovfile>></td>	<autoprovfile>audio[macaddress]</autoprovfile> >
</td <td><autoprovfile>device[macaddress].xml</autoprovfile>></td>	<autoprovfile>device[macaddress].xml</autoprovfile> >
<td>MiscSettings></td>	MiscSettings>

After downloading the first autoprovisioning file, the device will step through up to twenty additional <AutoprovFile> entries and try to download these files from the same server.

When the device finds a filename with the string **[macaddress**], it will replace this string with the mac address.

As an example, the user has configured option 43 on their DHCP server to "http://example.com," and on their server, they have a file named **0020f7123456.xml** (the same as the mac address of the device).

The file 0020f7123456.xml contains:

1. The device will first set it's name to 'Newname'.

- 2. It will try to download http://example.com/common.xml.
- 3. It will try to download http://example.com/sip_reg0020f7123456.xml.
- 4. It will try to download http://example.com/audio0020f7123456.
- 5. It will try to download http://example.com/device.xml.

The device is reconfigured every time it downloads a new file so if two files configure the same option the last one will be the one that is saved.

It is possible to autoprovision autoprovisioning values (for example, to disable autoprovisioning or to configure a time to check for new files).

Checking for New Autoprovisioning files on boot but it can be configured to also check after a periodic delay, when idle, or at a specified time. When one of these options is set, the device will download its autoprovisioning files again, and if it finds any differences from the files it downloaded on boot, it will force a reboot and reconfigure.

The Autoprovisioning Filename The autoprovisioning filename can contain a file, a file path, or a directory.

Autoprovisioning Filename	Autoprovisioning Server	File Downloaded
config.xml	10.0.1.3	10.0.1.3/config.xml
/path/to/config.xml	10.0.1.3	10.0.1.3/path/to/config.xml
subdirectory/path/	10.0.1.3	10.0.1.3/subdirectory/path/0020f7020002.xml

Table 2-13. Autoprovisioning File Name

TFTP options may not support subdirectories. If a directory is set in the filename field, firmware and audio files will also be downloaded from this subdirectory.

If the filename ends with a forward slash "/," the device will treat it as a subdirectory.

For example:

The autoprovisioning server is set to "https://www.example.com"

The autoprovisioning filename is set to "cyberdata/"

On boot, the device will try to download:

https://www.example.com/cyberdata/0020f7123456.xml

...and if this fails:

https://www.example.com/cyberdata/000000cd.xml

Audio files and firmware files will also add "cyberdata" to the URL before downloading.

Autoprovisioning <FirmwareSettings>

```
Firmware Updates <FirmwareFile>505-uImage-ceilingspeaker</FirmwareFile>
    <FirmwareServer>10.0.1.3</FirmwareServer>
    <OutdoorIntercom30>firmware_file_v9.3.0</OutdoorIntercom30>
    <OutdoorIntercom31>firmware_file_v10.3.0</OutdoorIntercom31>
    <CallButton31>firmware_file_v10.3.0</CallButton31>
    </FirmwareSettings>
```

In the <FirmwareSettings> section, the <FirmwareServer> element can be used to specify a different server for hosting firmware files. When this element is not available, the device will try to download the file from the autoprovisioning server.

The device will use the filename to determine when to autoprovision firmware updates. The default configuration is blank, so the first time you set a value in your autoprovisioning file, it may force a firmware update even if the firmware version has not changed.

The <FirmwareFile> name can contain path elements (i.e. /path/to/firmware/10.3.0-uImage-[device_file_name]).

The device also supports product strings for downloading firmware. If the <FirmwareFile> option is not set, the device will look for its particular product string for a firmware filename. In this way, a generic autoprovisioning file can specify unique firmware for a range of products.

The list of valid product strings:

<ProductString>CallButton31</ProductString> <ProductString>EmergencyIntercom31</ProductString> <ProductString>IndoorIntercom31SW</ProductString> <ProductString>IndoorIntercom31SW</ProductString> <ProductString>IndoorKeypad31</ProductString> <ProductString>OfficeRinger31</ProductString> <ProductString>OfficeRinger31SW</ProductString> <ProductString>OfficeRinger31SW</ProductString> <ProductString>OutdoorIntercom31SW</ProductString> <ProductString>OutdoorIntercom31</ProductString> <ProductString>OutdoorIntercom31SW</ProductString> <ProductString>OutdoorIntercom31SW</ProductString> <ProductString>OutdoorKeypad31</ProductString> <ProductString>OutdoorKeypad31</ProductString> <ProductString>Strobe31</ProductString> <ProductString>Strobe31</ProductString></productString></productString></productString></productString></productString></productString></productString></productString></productString></productString></productString></productString></productString></productString></productString></productString></productString></productString></productString></productString> Autoprovisioning | Example 1

oning Here's a simple example using four autoprovisioning files to configure two devices:

We boot up two devices with mac addresses 00:20:f7:02:00:01 and 00:20:f7:02:00:02 (Device1 and Device2).

The devices are set to use DHCP and that server provides an autoprovisioning server address with option 43. The address is "https://autoprovtest.server.net." The files on this server are as follows:

00000cd.xml

```
<MiscSettings>
<DeviceName>CyberData Autoprovisioned</DeviceName>
<AutoprovFile>sip_common.xml</AutoprovFile>
<AutoprovFile>sip_[macaddress].xml</AutoprovFile>
</MiscSettings>
```

sip_common.xml

```
<SIPSettings>
<SIPServer>10.0.0.253</SIPServer>
<RemoteSIPPort>5060</RemoteSIPPort>
</SIPSettings>
```

sip_0020f7020001.xml

```
<SIPSettings>
<SIPUserID>198</SIPUserID>
<SIPAuthPassword>ext198</SIPAuthPassword>
<DialoutExtension0>204</DialoutExtension0>
</SIPSettings>
```

sip_0020f7020002.xml

```
<SIPSettings>
<SIPUserID>500</SIPUserID>
<SIPAuthPassword>ext500</SIPAuthPassword>
<DialoutExtension0>555</DialoutExtension0>
</SIPSettings>
```

On boot, Device1 tries to fetch the file **0020f7023614.xml** from "https://autoprovtest.server.net". This file is not available, so device1 then tries to fetch the file **000000cd.xml**. This file exists, and Device1 parses the three elements.

- 1. Device1 changes its device name to CyberData Autoprovisioned.
- Device1 finds an AutoprovFile element containing the filename sip_common.xml. The device downloads sip_common.xml from "https://autoprovtest.server.net," and imports this configuration, setting the sip server to 10.0.0.253 and the remote port to 5060.3.
- 3. Device1 finds another AutoprovFile element containing the filename sip_[macaddress].xml. The device replaces the [macaddress] with its own mac address value creating sip_0020f7020001.xml, downloads this file from "https://autoprovtest.server.net," and imports this configuration. This sets the user ID to 198, the password to ext198, and the dialout extension to 204. Device1 is now finished with autoprovisioning.

Device2 goes through the same steps by setting its device name to **CyberData Autoprovisioned**, its SIP server to **10.0.0.253**, and its port to **5060**. When Device2 "sees" **sip_[macaddress].xml**, Device2 replaces it with its own mac address and downloads **sip_0020f7020002.xml** from "https://autoprovtest.server.net." Device2 sets the SIP User ID to **500**, the password to **ext500**, and the dialout extension to **555**.

Autoprovisioning Example 2

Here is another example of setting up your autoprovisioning files:

We boot up two devices with mac addresses **00:20:f7:02:00:01** and **00:20:f7:02:00:02** (Device1 and Device2) and boot them on a network with a DHCP server configured with an autoprovisioning server at **10.0.1.3** on option **150**. Our TFTP server has three files:

0020f7020001.xml

```
<MiscSettings>
<AutoprovFile>common_settings.xml</AutoprovFile>
</MiscSettings>
<SIPSettings>
<SIPUserID>198</SIPUserID>
<SIPAuthPassword>ext198</SIPAuthPassword>
<DialoutExtension0>204</DialoutExtension0>
</SIPSettings>
```

0020f7020002.xml

```
<MiscSettings>
<AutoprovFile>common_settings.xml</AutoprovFile>
</MiscSettings>
<SIPSettings>
<SIPUserID>500</SIPUserID>
<SIPAuthPassword>ext500</SIPAuthPassword>
<DialoutExtension0>555</DialoutExtension0>
</SIPSettings>
```

common_settings.xml

```
<MiscSettings>
<DeviceName>CyberData Autoprovisioned</DeviceName>
</MiscSettings>
<SIPSettings> <SIPServer>10.0.0.253</SIPServer>
<RemoteSIPPort>5060</RemoteSIPPort>
</SIPSettings>
```

1. On boot, Device1 downloads **0020f7020001.xml** from **10.0.1.3** and imports these values. The SIP User ID is **198**, the password is **ext198**, and the dialout extension is **204**.

2. Device1 then gets the filename **common_settings.xml** from the AutoprovFile element and downloads this file from the TFTP server at **10.0.1.3**. and imports these settings. The device name is set to **CyberData Autoprovisioned**, the SIP server is set to **10.0.0.253**, and the port is set to **5060**.

Device2 does the same except it downloads **0020f7020002.xml** on boot and imports these values instead. The Sip User ID is **500**, password is **ext500**, and dialout extension is **555**. Device2 then downloads the **common_settings.xml** file and imports those values. The device name is set to **CyberData Autoprovisioned**, the SIP server is set to **10.0.253**, and the port is set to **5060**.

XML Files XML files can contain <AutoprovFile> elements. If multiple DHCP options are specified, the device will try to download autoprovisioning files from each in turn. The device will only look for <AutoprovFile> elements in the first file downloaded from each server. You can specify up to 20 <AutoprovFile> elements in the first autoprovisioning file.

There are numerous ways to change an element of the **configuration(xml)** file. Using **sip ext** as an example, the extension can be changed:

Within the device-specific xml, i.e. **[macaddress].xml**, via the AutoprovFile element:<SIPSettings>/<SIPExt>

From the device specific xml, a pointer to a sip_common file

From the device specific xml, a pointer to the device specific sip_[macaddress].xml

From the common file, a pointer to sip_common.xml

From the common file, a pointer to the device specific (sip_[macaddress].xml)

Audio Files Audio files are stored in non-volatile memory and an autoprovisioned audio file will only have to be downloaded once for each device. Loading many audio files to the device from the web page could cause it to appear unresponsive. If this happens, wait until the transfer is complete and then refresh the page.

The device uses the file name to determine when to download a new audio file. This means that if you used autoprovisioning to upload a file and then changed the contents of this file at the TFTP server, the device will not recognize that the file has changed (because the file name is the same).

Since audio files are stored in non-volatile memory, if autoprovisioning is disabled after they have been loaded to the board, the audio file settings will not change. You can force a change to the audio files on the board by clicking **Restore Default** on the **Audio** page or by changing the autoprovisioning file with "**default**" set as the file name.

2.3.11.2 Sample dhcpd.conf

```

2.3.11.3 Download Template Button

The **Download Template** button allows the user to generate, download, edit, and then store an autoprovisioning template on the server that serves the autoprovisioning files for devices.

To generate an autoprovisioning template directly from the device, complete the following steps:

- 1. On the Autoprovisioning page, click on the Download Template button.
- 2. You will see a window prompting you to save a configuration file (**.xml**) to a location on your computer (Figure 2-23). The configuration file is the basis for the default configuration settings for your unit).
- 3. Choose a location to save the configuration file and click on OK. See Figure 2-23.

🕘 Ope	ening 0020f702bf18.xml	۰.	×

Figure 2-23. Configuration File

- 4. At this point, you can open and edit the autoprovisioning template to change the configuration settings in the template for the unit.
- 5. You can then upload the autoprovisioning file to a TFTP or HTTP server where the file can be loaded onto other devices.

2.4 Upgrade the Firmware and Reboot the Multicast Speaker

2.4.1 Downloading the Firmware

To download the firmware to your computer:

- 1. Download the latest firmware file from the **Downloads** tab at the following webpage: <u>http://www.cyberdata.net/products/011458/</u>
- 2. Unzip the firmware version file. This file may contain the following:
- Firmware file
- Release notes
- 3. Log in to the Multicast Speaker home page as instructed in Section 2.3.4, "Log in to the Configuration Home Page".
- 4. Click on the Firmware menu button to open the Firmware page. See Figure 2-24.

Caution Equipment Hazard: CyberData strongly recommends that you first reboot the device before attempting to upgrade the firmware of the device. See Section 2.4.2,

Figure 2-24. Firmware Page

"Reboot the Device".

- 7. Click on the **Upload** button. After selecting the **Upload** button, you will see the progress of the upload in the **Upload Progress** bar.
- 8. When the upload is complete, you will see the words **Upload finished** under **Status Messages**.
- 9. At this point, you will see the progress of the upload's post processing in the **Upload Post Processing** bar.
- **Note** Do not reboot the device before the upgrading process is complete.
- 10. When the process is complete, you will see the words **SWUPDATE Successful** under **Status Messages**.
- 11. The device will reboot automatically.
- 12. The **Home** page will display the version number of the firmware and indicate which boot partition is active.

Table 2-14 shows the web page items on the **Firmware** page.

Web Page Item	Description
Browse	Use the Browse button to navigate to the location of the Intercom firmware file that you want to upload.
Upload	Click on the Upload button to automatically upload the selected firmware and reboot the system.
	Note: This button only appears after the user has selected a firmware file.
Upload progress	Status bar indicates the progress in uploading the file.
Upload Post Processing	Status bar indicates the progress of the software installation.
Status Messages	Messages relevant to the firmware update process appear here.

Table 2-14. Firmware Page Parameters

2.4.2 Reboot the Device

To reboot a Multicast Speaker, log in to the web page as instructed in Section 2.3.4, "Log in to the Configuration Home Page".

1. Click on the **Reboot** button on the **Home** page (Figure 2-26). A normal restart will occur.

Reboot

2.5 Command Interface

Some functions on the device can be activated using simple POST commands to the web interface. The examples in Table 2-15 use the free unix utility, **wget**, but any program that can send http POST commands to the device should work.

2.5.1 Command Interface Post Commands

Note These commands require an authenticated session (a valid username and password to work).

Device Action	HTTP Post Command ^a
Place call to extension (example: extension 130)	wgetuser adminpassword adminauth-no-challengeno- check-certificatequiet -O /dev/null "https://10.0.3.71/cgi- bin/command.cgi"post-data "call=130"
Terminate active call	wgetuser adminpassword adminauth-no-challengeno- check-certificatequiet -O /dev/null "https://10.0.3.71/cgi- bin/command.cgi"post-data "terminate=yes"
Force reboot	wgetuser adminpassword adminauth-no-challengeno- check-certificatequiet -O /dev/null "https://10.0.3.71/cgi- bin/command.cgi"post-data "reboot=yes"
Test Audio button	wgetuser adminpassword adminauth-no-challengeno- check-certificatequiet -O /dev/null "https://10.0.3.71/cgi- bin/command.cgi"post-data "test_audio=yes"
Announce IP address	wgetuser adminpassword adminauth-no-challengeno- check-certificatequiet -O /dev/null "https://10.0.3.71/cgi- bin/command.cgi"post-data "speak_ip_address=yes"
Play the "0" audio file	wgetuser adminpassword adminauth-no-challengeno- check-certificatequiet -O /dev/null "https://10.0.3.71/cgi- bin/audiofiles.cgi"post-data "play_0=yes"
Play the "1" audio file	wgetuser adminpassword adminauth-no-challengeno- check-certificatequiet -O /dev/null "https://10.0.3.71/cgi- bin/audiofiles.cgi"post-data "play_1=yes"
Play the "2" audio file	wgetuser adminpassword adminauth-no-challengeno- check-certificatequiet -O /dev/null "https://10.0.3.71/cgi- bin/audiofiles.cgi"post-data "play_2=yes"

Delete the "Ring tone" audio file	wgetuser adminpassword adminauth-no-challengeno- check-certificatequiet -O /dev/null "https://10.0.3.71/cgi- bin/audiofiles.cgi"post-data "delete_ringtone=yes"
Delete the "Night Ring" audio file	wgetuser adminpassword adminauth-no-challengeno- check-certificatequiet -O /dev/null "https://10.0.3.71/cgi- bin/audiofiles.cgi"post-data "delete_nightring=yes"

Table 2-15. Command Interface Post Commands (continued)

a.Type and enter all of each http POST command on one line.

A.1 Mounting

See Figure A-1 to mount the speaker.

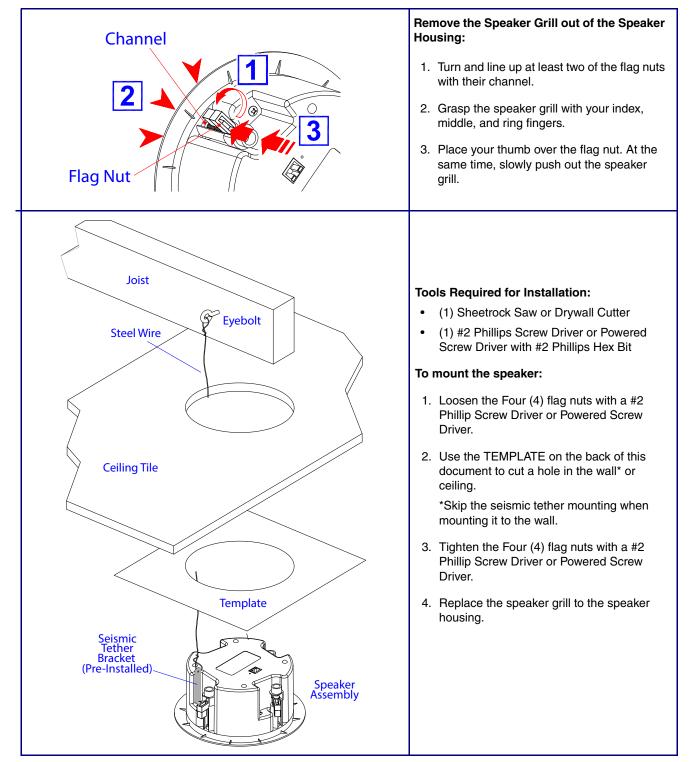

Figure A-1. Mounting the Speaker

A.2 Dimensions

Figure A-2 shows the dimensions for the Multicast Speaker.

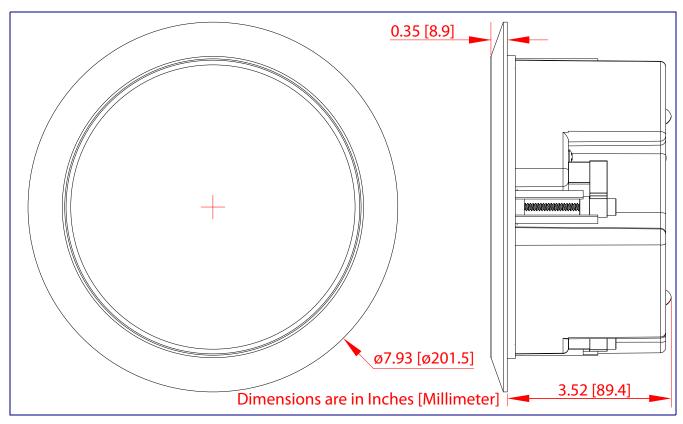

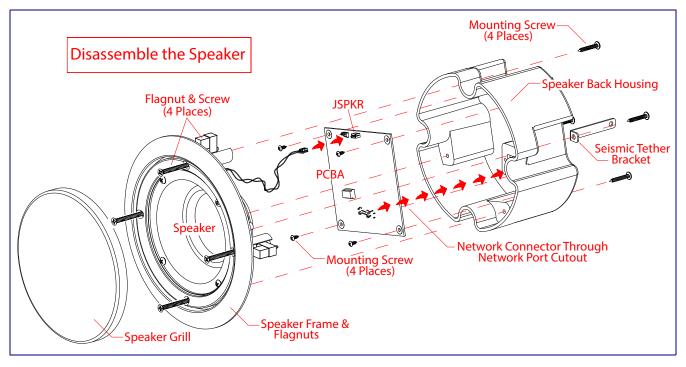

Figure A-2. Dimensions

A.3 Disassembling the Speaker

Figure A-3 shows how to disassemble the Multicast Speaker.

Appendix C: Setting up a TFTP Server

C.1 Set up a TFTP Server

C.1.1 Autoprovisioning requires a TFTP server for hosting the configuration file.

C.1.2 In a LINUX Environment

To set up a TFTP server on LINUX:

- 1. Create a directory dedicated to the TFTP server, and move the files to be uploaded to that directory.
- Run the following command where /tftpboot/ is the path to the directory you created in Step 1: the directory that contains the files to be uploaded. For example:

in.tftpd -l -s /tftpboot/your_directory_name

C.1.3 In a Windows Environment

You can find several options online for setting up a Windows TFTP server. This example explains how to use the Solarwinds freeware TFTP server, which you can download at:

https://www.cyberdata.net/pages/solarwinds

To set up a TFTP server on Windows:

- 1. Install and start the software.
- 2. Select File/Configure/Security tab/Transmit Only.
- 3. Make a note of the default directory name, and then move the firmware files to be uploaded to that directory.

Appendix C: Troubleshooting/Technical Support

C.1 Frequently Asked Questions (FAQ)

To see a list of frequently asked questions for your product, click on the **FAQs** tab at the following webpage:

http://www.cyberdata.net/products/011458/

C.2 Documentation

The documentation for this product is released in an English language version only.

To download PDF copies of CyberData product documentation, click on the **Downloads** tab at the following webpage:

http://www.cyberdata.net/products/011458/

C.3 Contact Information

Contact CyberData Corporation 3 Justin Court Monterey, CA 93940 USA <u>www.CyberData.net</u> Phone: 800-CYBERDATA (800-292-3732) Fax: 831-373-4193

Sales Sales 831-373-2601, Extension 334

TechnicalThe fastest way to get technical support for your VoIP product is to submit a VoIP TechnicalSupportSupport form at the following website:

http://support.cyberdata.net/

The Support Form initiates a ticket which CyberData uses for tracking customer requests. Most importantly, the Support Form tells us which PBX system and software version that you are using, the make and model of the switch, and other important information. This information is essential for troubleshooting. Please also include as much detail as possible in the **Comments** section of the Support Form.

Phone: (831) 373-2601, Extension 333

C.4 Warranty and RMA Information

The most recent warranty and RMA information is available at the following website address:

http://support.cyberdata.net/
