

School Paging And Access Control Using CyberData Devices With Your VoIP Phone System

"This is an emergency...."

"Shooter on campus...."

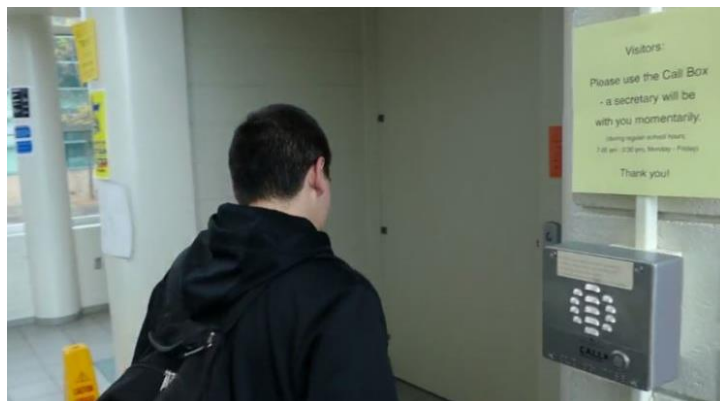

CyberData paging and notification devices deliver critical communication across your VoIP network

Use any on-premise or cloud-based VoIP phone system to page and provide access control.

Multicast microphone can multicast out live messages to all our endpoints, while the SIP Paging Server can enable zone paging and scheduled announcements as well as **chimes** and **bells for class changes**, providing up to 250 scheduled events.

CyberData Intercoms and Secure Access Control Endpoints provide two-way communication and secure, safe entry to buildings or offices.

"Mr Smith, can you let me in?"

CyberData maintains one of the most comprehensive lists of IP PBX servers certified to work with our VoIP products
