

Peavey CS 800 Amplifier

V2 Paging Amplifier Connections

Notes

The CyberData V2 Paging Amplifier's RCA Line Out can connect to one Channel A input on the Peavey CS 800 Amplifier. We recommend using a phono cable terminated on one end with a male plug and the other end stripped for a two-wire connection to the Line Out terminal pins 7 and 8 on the V2 Paging Amplifier's terminal block.

Link the unused Channel A input to a Channel B input using a phone cable with male plugs per the Peavey CS 800 Amplifier diagram on the left. Set the DDT and Mode switches according to the diagram.
