

## Mounting

You have the option to use the following mounting template to mark, and then drill two 3/16" (0.1875") holes for the mounting anchors.

To install and mount the V2 Paging Server:

1. Install the mounting anchors in the holes, and position the V2 Paging Server mounting holes over the anchors.
2. Use the two #6 sheet metal screws to secure the V2 Paging Server onto the mounting surface.

# CyberData *Installation Quick Reference*

The IP Endpoint Company

## VoIP V2 Paging Server

*SIP Compliant*

### 011092

The VoIP V2 Paging Server enables access to existing paging speakers through a VoIP phone system. This interface uses a standard paging amplifier, and supports paging to multiple zones from a VoIP phone.

Parameter	Factory Default Setting
IP Addressing	DHCP
IP Address <sup>a</sup>	10.10.10.10
Web Access Username	admin
Web Access Password	admin
Subnet Mask <sup>a</sup>	255.0.0.0
Default Gateway <sup>a</sup>	10.0.0.1

a. Default if there is not a DHCP server present.

Specification Category	Specification
Line In:	
Input Signal Amplitudes	2.0 VPP maximum
Input Impedance	10k Ohm
Line Out:	
Output Signal Amplitudes	2.0 VPP maximum
Output Level	+2dBm nominal
Total Harmonic Distortion	0.5% maximum
Output Impedance	10k Ohm

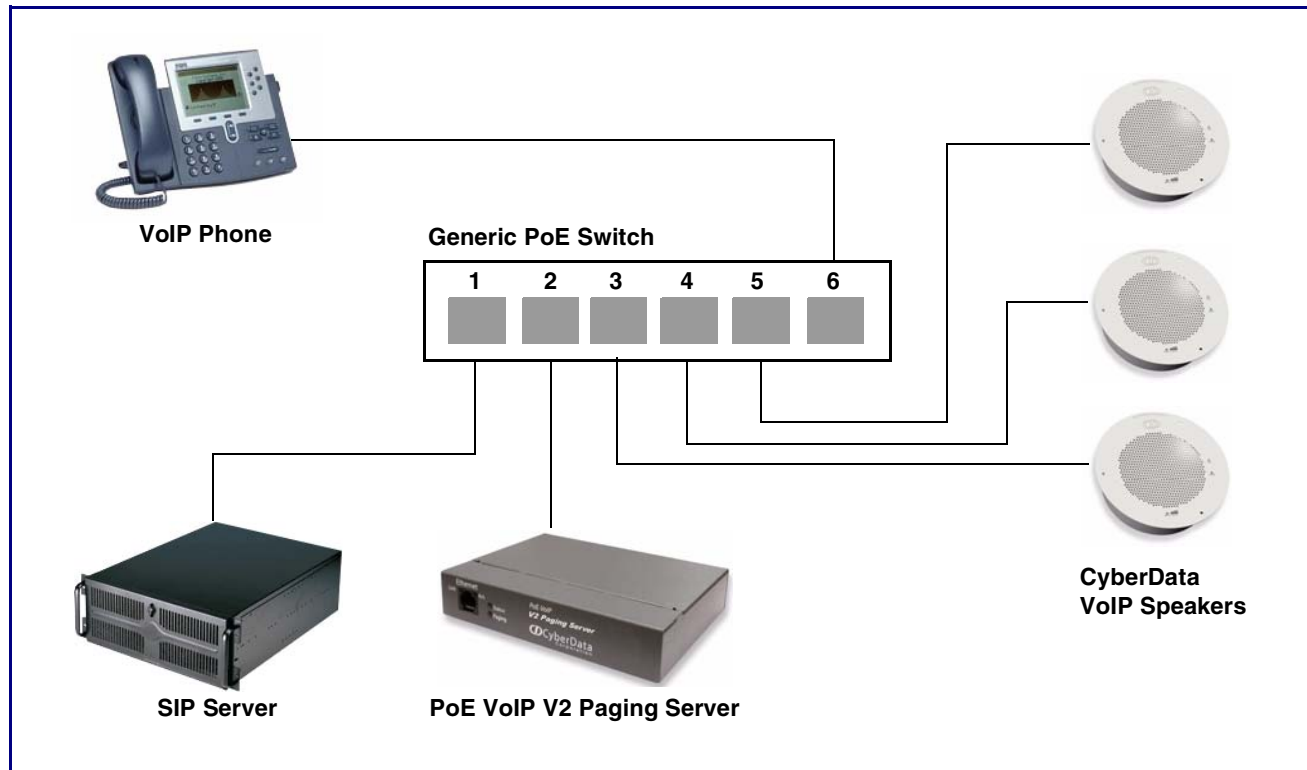

## Getting Started

- Be sure that you have received all the parts described in the [Parts List](#) section.
- Download the *VoIP V2 Paging Server Operations Guide* at the following website:  
<http://www.cyberdata.net/products/voip/digitalanalog/pagingserverv2/docs.html>

## Parts List

## Typical Paging System Setup Using the V2 Paging Server

## Setting Up the VoIP V2 Paging Server

<p><b>PoE</b></p>	<p>To set up the V2 Paging Server, connect the device to your network:</p> <p><b>Poe</b></p> <ul style="list-style-type: none"> <li>For <b>PoE</b>, plug one end of an 802.3af Ethernet cable into the V2 Paging Server Ethernet port. Plug the other end of the Ethernet cable into your network. See the figure on the left.</li> </ul>
<p><b>Non PoE (with 48 VDC power supply)</b></p>	<p><b>Non-Poe</b></p> <ul style="list-style-type: none"> <li>For <b>Non-PoE</b>, connect the V2 Paging Server to a <b>48VDC power supply</b>. See the figure on the left.</li> </ul>
<p><b>Chassis Ground</b></p>	<p><b>Chassis Ground</b></p> <ul style="list-style-type: none"> <li>If required, connect the earth grounding wire to the <b>Chassis Ground</b>. See the figure on the left.</li> </ul>

## Verifying Operations and Settings

<p><b>Front View with LEDs</b></p> <ul style="list-style-type: none"> <li>The round, <b>GREEN/BLUE Status</b> LED on the front of the V2 Paging Server comes on indicating that the power is on. Once the device has been initialized, this LED blinks at one second intervals.</li> <li>The square, <b>GREEN/AMBER Link</b> LED above the Ethernet port indicates that the network connection has been established. The Link LED changes color to confirm the auto-negotiated connection speed:             <ul style="list-style-type: none"> <li>The Link LED is <b>GREEN</b> at 10 Mbps.</li> <li>The Link LED is <b>AMBER</b> at 100 Mbps.</li> </ul> </li> <li>The <b>GREEN Paging</b> LED comes on after the device is booted and initialized. This light blinks when a page is in progress. You can disable <b>Beep on Initialization</b> on the <b>Device Configuration</b> page.</li> <li>The square, <b>GREEN Activity</b> LED blinks when there is network traffic.</li> </ul>
<p><b>Back View with RTFM Switch</b></p> <p>To restore the V2 Paging Server's factory default settings:</p> <ol style="list-style-type: none"> <li>Press and hold the <b>RTFM</b> switch while all the indicator lights turn off.</li> <li>Continue to press and hold the switch until after the indicator lights turn back on, and then release the switch.</li> <li>All V2 Paging Server settings are restored to the factory defaults, and the unit reboots.</li> </ol>
