Technical Support

The fastest way to get technical support for your VoIP product is to submit a VoIP Technical Support form at the following website:

<https://support.cyberdata.net/>

Phone: (831) 373-2601, Ext. 333

Email: support@cyberdata.net

Fax: (831) 373-4193

Company and product information is at www.cyberdata.net.

Revision Information

Revision 932055A, which corresponds to firmware version 20.5.0, was released on November 19, 2024.

Pictorial Alert Icons

	<p>General Alert</p> <p><i>This pictorial alert indicates a potentially hazardous situation. This alert will be followed by a hazard level heading and more specific information about the hazard.</i></p>
	<p>Ground</p> <p><i>This pictorial alert indicates the Earth grounding connection point.</i></p>

Hazard Levels

Danger: Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury. This is limited to the most extreme situations.

Warning: Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

Caution: Indicates a potentially hazardous situation which, if not avoided, could result in minor or moderate injury. It may also alert users against unsafe practices.

Notice: Indicates a statement of company policy (that is, a safety policy or protection of property).

The safety guidelines for the equipment in this manual do not purport to address all the safety issues of the equipment. It is the responsibility of the user to establish appropriate safety, ergonomic, and health practices and determine the applicability of regulatory limitations prior to use. Potential safety hazards are identified in this manual through the use of words Danger, Warning, and Caution, the specific hazard type, and pictorial alert icons.

Important Safety Instructions

1. Read these instructions.
2. Keep these instructions.
3. Heed all warnings.
4. Follow all instructions.
5. Do not use this apparatus near water.
6. Clean only with dry cloth.
7. Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.
8. Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
9. Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10. Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
11. Only use attachments/accessories specified by the manufacturer.
12. Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
13. Prior to installation, consult local building and electrical code requirements.

14. WARNING: The IP Speaker with Talk-Back enclosure is not rated for any AC voltages!

 <p>GENERAL ALERT</p>	<p>Warning <i>Electrical Hazard:</i> This product should be installed by a licensed electrician according to all local electrical and building codes.</p>
 <p>GENERAL ALERT</p>	<p>Warning <i>Electrical Hazard:</i> To prevent injury, this apparatus must be securely attached to the floor/wall in accordance with the installation instructions.</p>
 <p>GENERAL ALERT</p>	<p>Warning The PoE connector is intended for intra-building connections only and does not route to the outside plant.</p>

Abbreviations and Terms

Abbreviation or Term	Definition
A-law	A standard companding algorithm, used in European digital communications systems to optimize, i.e., modify, the dynamic range of an analog signal for digitizing.
AVP	Audio Video Profile
Cat 5	TIA/EIA-568-B Category 5
DHCP	Dynamic Host Configuration Protocol
LAN	Local Area Network
LED	Light Emitting Diode
Mbps	Megabits per Second.
NTP	Network Time Protocol
PBX	Private Branch Exchange
PoE	Power over Ethernet (as per IEEE 802.3af standard)
RTFM	Reset Test Function Management
SIP	Session Initiated Protocol
SRTP	Secure Real Time Protocol
u-law	A companding algorithm, primarily used in the digital telecommunication
UC	Unified Communications
VoIP	Voice over Internet Protocol

1 Installing the IP Speaker with Talk-Back

The installation template for the IP Speaker with Talk-Back is located on the Installation Quick Reference Guide that is included in the packaging with each Speaker.

Additional connections options are shown below.

1.1 Optional Connections

Figure 1-1. Optional Connections

Function	Connections
Auxiliary 8-Ohm speaker connection (not to be used when the Clock is connected).	AUX SPEAKER OUT(-) AUX SPEAKER OUT(+)
Relay contacts rated at 30 VDC @ 1A.	RELAY NO RELAY COM
NOT USED	LINE IN (+) LINE IN (-)
Audio line - level output to external audio amplifier. 2v P-P into 10k Ohms.	LINE OUT (-) LINE OUT (+)
Button positive sense connection	SENSE (+)
Button negative sense connection	SENSE- COM
LED negative connection	LED COM
LED positive connection	LED (+)

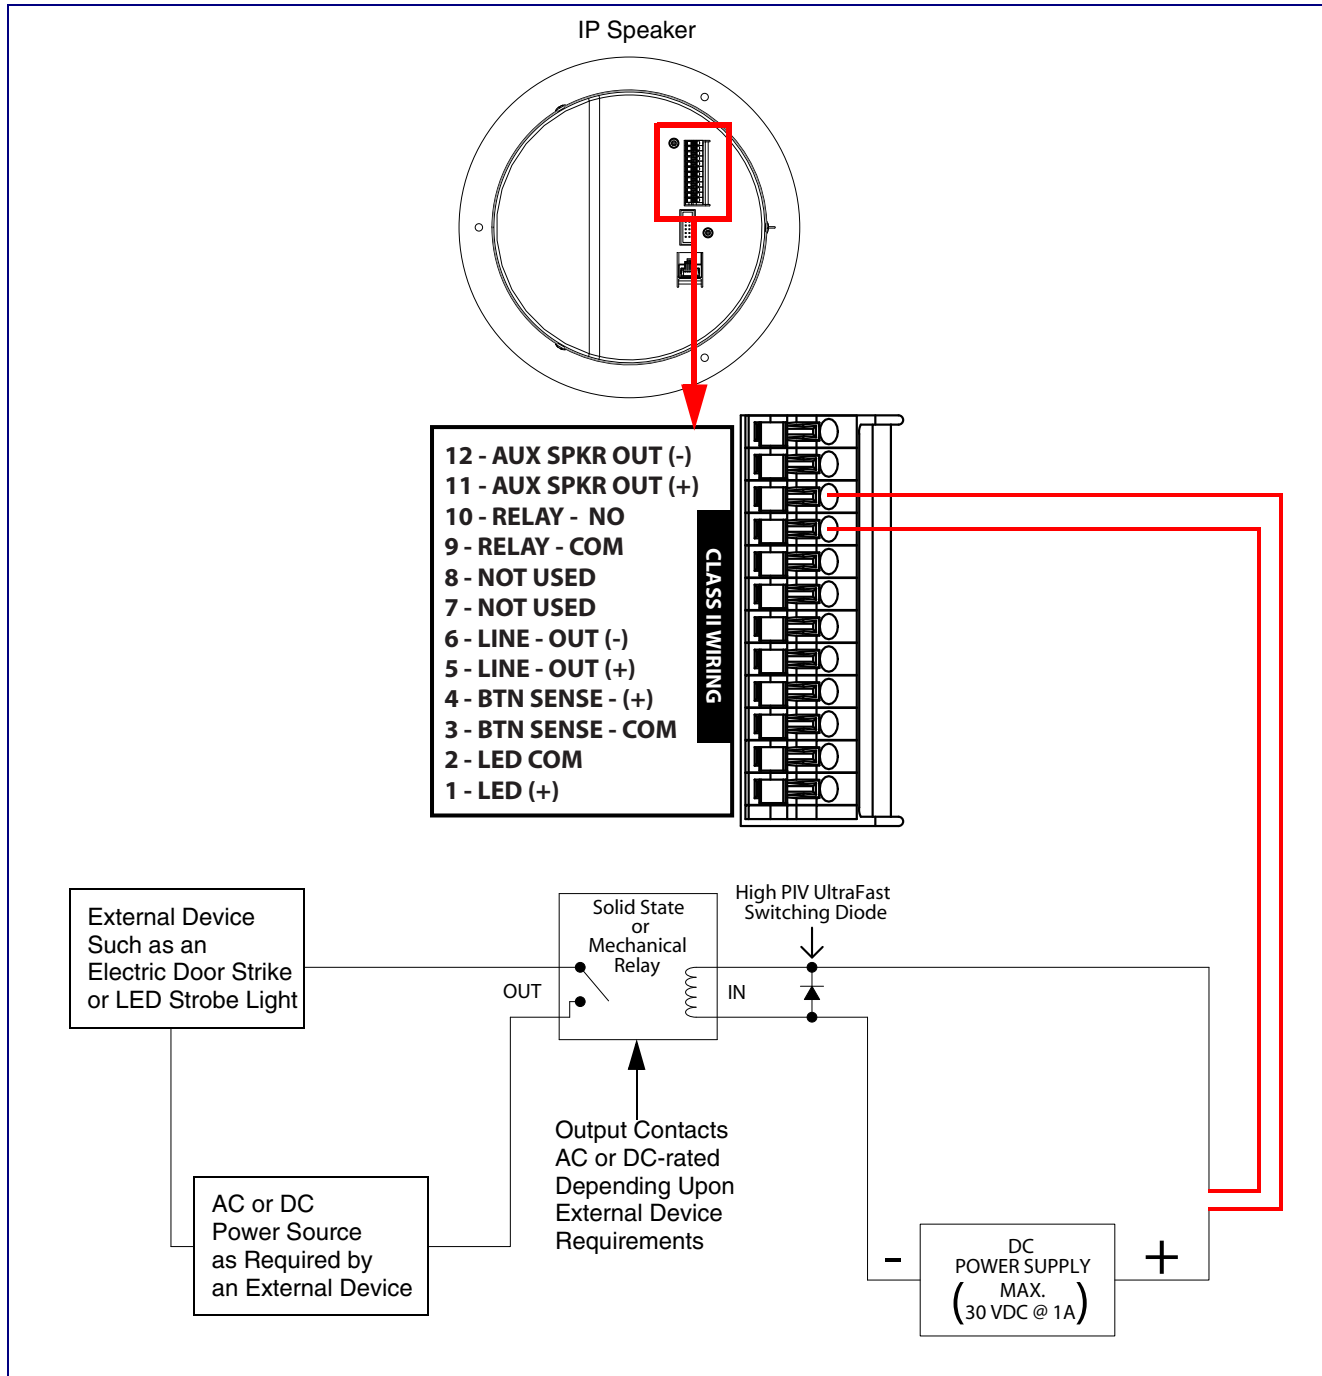

Connections 1 through 4 are intended for use with the [011508 Remote Call Button](#)

1.2 IP Speaker with Talk-Back with an External Device

In [Figure 1-2](#), when the IP Speaker with Talk-Back is called from a remote phone, the relay on the speaker can be programmed to drive an external device such as an alert strobe. This external device may also be addressed from a separate Unified Communication (UC) server.

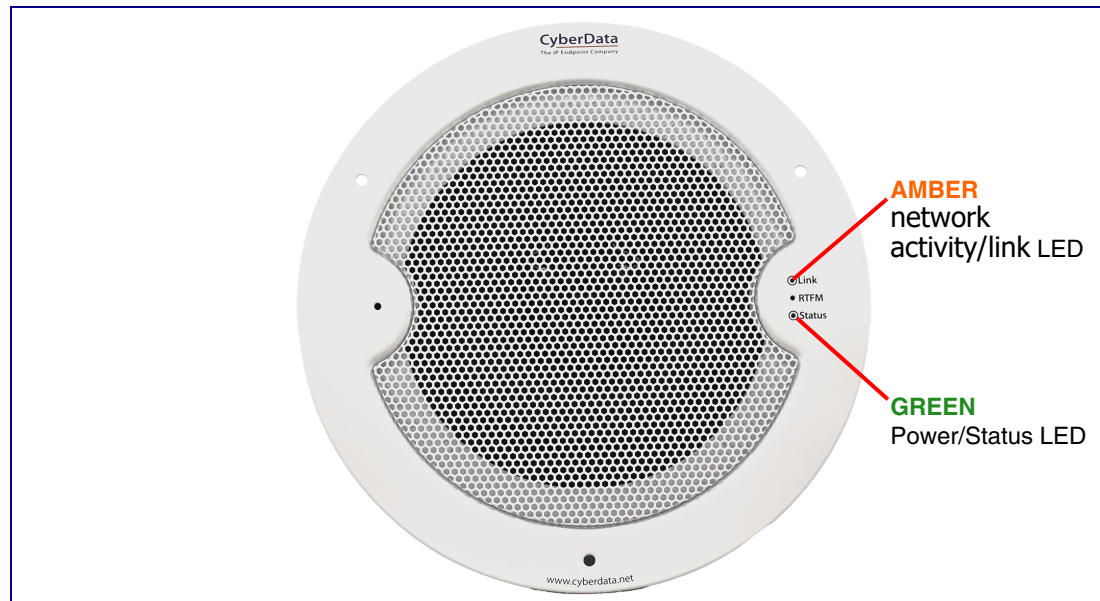

Figure 1-2. SIP Speaker with Talk-Back with an External Device

1.3 Confirm that the Speaker is Operational and Linked to the Network

After connecting the speaker to the 802.3af compliant Ethernet hub, the LEDs on the speaker face confirm that the speaker is operational and linked to the network.

Figure 1-3. Status and Activity LEDs

1.3.1 Status LED

After supplying power to the speaker:

1. The green power/status LED and the amber network activity/link LED comes on immediately.
2. After about 23 seconds with a static IP address (or 27 seconds if the board is set to use DHCP), the green LED will blink twice to indicate that the board is fully booted. The speaker will beep at this time if the **Beep on Init** option is enabled on the **Device Page** (see [Section 2.2, "Device"](#)).

Note If the board is set to use DHCP and there is not a DHCP server available on the network, it will try 12 times with a three second delay between tries and eventually fall back to the programmed static IP address (by default 192.168.1.23). This process will take approximately 80 seconds.

Note The front power/status LED will remain solid on during operation.

1.3.2 Link LED

- The **Link** LED is illuminated when the network link to the speaker is established.
- The **Link** LED blinks to indicate network traffic.

2 Configure the Device

2.1 Home Page

Figure 2-1. Log In Page

1. Open your browser to the IP Speaker with Talk-Back IP address.

Note If the network does not have access to a DHCP server, the device will default to an IP address of 192.168.1.23.

Note Make sure that the PC is on the same IP network as the IP Speaker with Talk-Back.

Note You may also download CyberData's VoIP Discovery Utility program which allows you to easily find and configure the default web address of the CyberData VoIP products.

CyberData's VoIP Discovery Utility program is available at the following website address:

<https://www.cyberdata.net/pages/discovery>

Note The Intercom ships in DHCP mode. To get to the **Home** page, use the discovery utility to scan for the device on the network and open your browser from there.

2. On the Log In Page (Figure 2-1), use the following default **Web Access Username** and **Web Access Password** to access the **Home Page** (Figure 2-3):

Web Access Username: **admin**

Web Access Password: **admin**

2.1.1 Announcing the IP Address

The RTFM button is located on the front of the each device (Figure 2-2). Use a paper clip to access the button through the hole.

Briefly pressing the RTFM button prompts the device to announce its IP address.

Figure 2-2. RTFM Button

2.1.2 Restoring Factory Defaults

To restore the device to its factory default settings (Table 2-1), hold the RTFM button for approximately seven seconds. After 15 to 20 seconds, "Restoring defaults, rebooting" is announced.

The device will default to DHCP to obtain an IP address, or will use 192.168.1.23 if a DHCP server is not present.

Table 2-1. Factory Default Settings

Parameter	Factory Default Setting
IP Addressing	DHCP
IP Address ^a	192.168.1.23
Web Access Username	admin
Web Access Password	admin
Subnet Mask ^a	255.255.255.0
Default Gateway ^a	192.168.1.1

a. Default if there is not a DHCP server present.

Figure 2-3. Home Page

The screenshot displays the CyberData Home Page for a SIP Speaker device. The interface is organized into a header section and six main configuration panels, each with a title bar and a list of settings.

Header Information:

- CyberData:** The IP Endpoint Company
- Product:** SIP Speaker
- Firmware:** v22.0.0
- Serial:** 394203569
- MAC:** 00:20:f7:05:7f:4a
- Available Storage:** 1380MB
- Device Status:** Idle
- Buttons:** Test, Save, Cancel, Reboot, Logout

2.2 Device

Figure 2-5. Device Page

The screenshot displays the CyberData Device Page configuration interface. At the top, the device information is shown: Product: SIP Speaker, Serial: 394203569, Available Storage: 1380MB, Firmware: v22.0.0, MAC: 00:20:F7:05:7F:4a, and Device Status: Idle. Action buttons for Test, Save, Cancel, Reboot, and Logout are visible. The main configuration area is divided into several sections:

- Relay Settings:** Control Relay with DTMF Code (OFF), DTMF Pulse Code (123), DTMF Pulse Code Duration (10 seconds), DTMF Activation Code (456), DTMF Deactivation Code (789), Relay During Ring (OFF), Relay During Night Ring (OFF), Relay While Call Active (OFF), Relay On Button Press (OFF), Relay On Button Press Duration (5 seconds), Relay While Sensor Active (ON).
- Time Settings:** NTP Server (north-america.pool.ntp.org), NTP Timezone (America/Los_Angeles (-8)), Current Time (Wed, 06 Nov 2024 14:53:32).
- Clock Kit Settings:** Status (Not Installed), Ambient Light Sensor (OFF), Brightness (5), Color Type (BLINK), Time Format (24 hrs).
- DTMF Settings:** Require Security Code (ENABLED), Security Code (****), Monitor DTMF Toggle Key ([Star Symbol]).
- Power Settings:** 802.3AT Mode (Not detected. Disabled), Force 802.3AT Mode (OFF).
- Misc Settings:** Device Name (new_1105), Beep on Init (OFF), Two Speakers Connected (OFF).

The footer of the page includes the CyberData logo and a link to Support.

If you are using an InformaCast enabled device, you will see the following:

Figure 2-6. InformaCast enabled Device

The screenshot shows the InformaCast Settings page. The title is "InformaCast Settings". Below the title, the InformaCast Server is configured with the URL: `http://10.0.1.195:8081/InformaCast/resources`.

2.3 Audio

Figure 2-7. Audio Page

The screenshot displays the configuration interface for a CyberData SIP Speaker. The top header includes the product name (SIP Speaker), serial number (394203569), MAC address (00:20:f7:05:7f:4a), and available storage (1380MB). The device status is 'Idle'. The interface is divided into three main sections:

- Audio Settings:** Includes Ambient Noise Compensation (OFF), Volume Boost (None), and volume controls for SIP, Multicast, Ring, Sensor, and Push to Talk (all set to 4). Microphone Gain is also set to 4.
- Talkback Settings:** Full-Duplex is set to OFF.
- Voice-Operated Switch:** Voice-Operated Switch is set to OFF.
- Push to Talk:** Push to Talk (PTT) and DTMF Push to Talk (PTT) are both set to OFF.
- Health Check Settings:** Schedule Health Check is OFF. Run once per: Day. Time of Day: 0-23 (HH:MM). Day of Week: Sunday. Day of Month: 1-31. A log of health check results is shown, all of which passed.

Buttons for 'Test', 'Save', 'Cancel', 'Reboot', and 'Logout' are located in the top right. At the bottom, there are buttons for 'Run Health Check', 'Configure Health Check', 'Delete Health Check Log', and 'Download Health Check Log'. The footer contains 'CyberData - Support'.

2.4 Network

Figure 2-8. Network Page

The screenshot displays the Network configuration page for a CyberData device. The page is divided into three main sections: Network Status, Network Settings, and VLAN Settings. At the top, there is a header bar with device information and control buttons.

Header Information:

- CyberData** (The IP Endpoint Company)
- Product:** SIP Speaker
- Firmware:** v22.0.0
- Serial:** 394203569
- MAC:** 00:20:f7:05:7f:4a
- Available Storage:** 1380MB
- Device Status:** Idle
- Buttons:** Test, Save, Cancel, Reboot, Logout

Network Status:

IP Address Protocol	DHCP
IP Address	10.10.1.79

Footer: CyberData • Support

2.5 SIP (Session Initiation Protocol)

This page sets the options for phone calls. Configure up to 3 servers, with 2 acting as backup, and a server for the nightringer. The nightringer is a second sip extension that only rings, never connects to a call. Many customers use the nightringer in a hunt group.

Use this page to configure the options for security, transport, codec, and others.

Note For specific server configurations, go to the following website address:

<https://www.cyberdata.net/pages/connecting-to-ip-pbx-servers>

Figure 2-9. SIP Page

The screenshot displays the SIP configuration interface for a CyberData device. The top header includes the CyberData logo, product information (SIP Speaker, v22.0.0), serial and MAC addresses, available storage (1380MB), and device status (Idle). Navigation buttons for Test, Save, Cancel, Reboot, and Logout are present.

The main configuration area is divided into three panels:

- SIP Settings:**
 - SIP Operation: ENABLED
 - SIP Registration: ENABLED
 - Buffer SIP Calls: DISABLED
 - Play Stored Message: DISABLED
 - Auto-Answer Incoming Calls: ON
 - Beep Before Paging: OFF
 - Play Ringback Tone: OFF
 - Remote SIP Port: 5060
 - Local SIP Port: 5060
 - SIP Transport Protocol: UDI
 - TLS Version: 1.2
 - Verify Server Certificate: OFF
 - Outbound Proxy: Outbound Proxy
 - Outbound Proxy Port: 0
 - Cisco SRST: OFF
 - Disable rport Discovery: OFF
 - Keep Alive Timeout: 10000 milliseconds (ms)
 - Terminate call after delay: 0 seconds
 - Audio Codec: Auto Select
 - RTP Port (even): 10500
 - Asymmetric RTP: OFF
 - Jitter Buffer: 50
 - RTP Encryption (SRTP): DISABLED
- SIP Server Settings:**
 - Primary SIP Server: 10.0.0.253
 - Primary SIP User ID: 199
 - Primary SIP Auth ID: 199
 - Primary SIP Auth Password: *****
 - Registration Interval: 360 seconds
 - Backup SIP Server 1: Host or IP address
 - Backup SIP User ID: Backup SIP User ID
 - Backup SIP Auth ID: Backup SIP Auth ID
 - Backup SIP Auth Password: Backup SIP Auth Password

 - Backup SIP Server 2: Host or IP address
 - Backup SIP User ID: Backup SIP User ID
 - Backup SIP Auth ID: Backup SIP Auth ID
 - Backup SIP Auth Password: Backup SIP Auth Password
 - Registration Interval: 360 seconds
 - Monitor SIP Server: Host or IP address
 - Monitor User ID: Monitor User ID
 - Monitor Auth ID: Monitor Auth ID
 - Monitor Auth Password: Monitor Auth Password
- Nightringer Settings:**
 - SIP Server: Host or IP address
 - SIP User ID: User ID
 - SIP Auth ID: Auth ID
 - SIP Auth Password: Password
 - Registration Interval: 360 seconds

2.5.1 Dial Out Extension Strings and DTMF Tones (using rfc2833)

Outgoing calls support delayed DTMF (rfc2833) with the first comma pausing 2 seconds and subsequent commas pausing 1 second.

2.5.2 Point-to-Point Configuration

Dialing point-to-point allows the device to call and a single endpoint. All CyberData endpoints and many phones can use this option. To do this, enable **SIP Operation**, do not enable **SIP Registration**, and use the endpoint's IP address as the Dial Out extension. Delayed DTMF is supported. See [Figure 2-10](#).

2.7 Multicast

The Multicast Configuration page allows the device to join up to ten paging zones for receiving RTP audio streams. A paging zone can consist of one or many CyberData multicast group-enabled products. There is no limit to how many speakers can participate in a given paging zone. Each multicast group is defined by a multicast address and port number.

Each multicast group is assigned a priority, allowing simultaneously arriving pages to be serviced based on importance. Multicast groups are compatible with IGMP through version 3. The device supports simultaneous SIP and Multicast. The device will prioritize simultaneous audio streams according to their priority in the list. If both SIP and Multicast is enabled, SIP audio streams are considered priority 4.5. SIP audio will interrupt multicast streams with priority 0 through 4 and will be interrupted by multicast streams with priority 5 through 9.

During priority 9 multicast streams, the volume is set to maximum. Ringtones all play at the same priority level. This means that it is possible to have a nightring tone and a normal ringtone playing at the same time.

To use Polycom Group Paging, configure a multicast group with the IP address and port number of the Polycom phone. The default is 224.0.1.116, port 5001, but can be configured through the phone. Polycom defaults to channels 1, 24, and 25, but can also be configured. The payload should be 20 ms and the codec G711mu.

*SIP calls: Priority 4.5
Port range: 2000-65535
Priority: 9 is the highest, 0 is the lowest
Audio Streams: Higher priority supersedes lower ones
Priority 9: Plays at maximum volume*

CyberData • Support

2.8 Sensor

The door sensor (pins 5 and 6) on the header can be used to monitor a door's open or closed state. There is an option on the **Sensor** page to trigger on an open or short condition on these pins. The door sensor alarm will be activated when the **Door Open Timeout** parameter has been met.

The intrusion sensor is an optical sensor installed on the Intercom board and will be activated when the Intercom is removed from the case.

Each sensor can trigger up to five different actions:

- Flash the LED until the sensor is deactivated (roughly 10 times/second)
- Activate the relay until the sensor is deactivated
- Loop an audio file out of the Intercom speaker until the sensor is deactivated
- Call an extension and establish two way audio
- Call an extension and play a pre-recorded audio file

Note Calling a preset extension can be set up as a point-to-point call, but currently can't send delayed DTMF tones.

Figure 2-14. Sensor Page

The screenshot displays the CyberData web interface for configuring a SIP Speaker. The top navigation bar includes the CyberData logo, product information (SIP Speaker, v22.0.0), serial and MAC addresses, available storage (1380MB), and device status (Idle). Action buttons for Test, Save, Cancel, Reboot, and Logout are visible. The main content area is divided into two panels: Sensor Settings and Button Settings.

Sensor Settings	
Sensor Type:	Normally Open
Open Timeout:	0 seconds
Play Audio Locally:	Disabled
Call Extension:	Disabled
Dial Out Extension:	204
Dial Out ID:	id204
Play Recorded Audio:	Disabled
Repeat Sensor Message:	0

Button Settings	
Button Installed:	OFF
Button LED Lit when Idle:	ON
Button LED Brightness:	255
Blink button LED on monitor call:	OFF
Prevent Call Termination:	OFF
Dial Out Extension:	204
Dial Out ID:	id204

2.9 Audiofiles

The **Audiofiles** page is used to add custom audio to the board. User uploaded audio will take precedence over the audio files shipped with the Intercom.

Figure 2-15. Audiofiles Page

The screenshot displays the 'Audio Files' configuration page in the CyberData web interface. The page header includes the CyberData logo, product information (SIP Speaker, Firmware: v22.0.0), device details (Serial: 394203569, MAC: 00:20:f7:05:7f:4a), and storage status (Available Storage: 1380MB, Device Status: Idle). A navigation bar at the top right contains buttons for Test, Save, Cancel, Reboot, and Logout. The main content area is a table with the following structure:

File Name	Currently set to:	default	Choose File	No file chosen	Play	Save	Delete
0:	Currently set to:	default	Choose File	No file chosen	Play	Save	Delete
1:	Currently set to:	default	Choose File	No file chosen	Play	Save	Delete

CyberData • Support

2.10 Events

The **Events** page specifies a remote server that can be used to receive HTTP POST events when actions take place on the board.

Figure 2-18. Events Page

If you are using an InformaCast enabled device, you will see the following:

Figure 2-19. InformaCast enabled Device

2.10.1 Example Packets for Events

The server and port are used to point to the listening server and the 'Remote Event Server URL' is the destination URL (typically the script running on the remote server that's used to parse and process the POST events).

Note The XML is URL-encoded before transmission so the following examples are not completely accurate.

Here are example packets for every event:

```
POST xmlparse_engine HTTP/1.1
Host: 10.0.3.79
User-Agent: CyberData/1.0.0
Content-Length: 197
Content-Type: application/x-www-form-urlencoded

<?xml version="1.0" encoding="ISO-8859-1"?>

2.11 Terminus

Figure 2-20. Terminus Page

The screenshot displays the Terminus configuration interface. At the top, a purple header bar contains the CyberData logo and the following information: Product: SIP Speaker, Firmware: v22.0.0, Serial: 394203569, MAC: 00:20:f7:05:7f:4a, Available Storage: 1380MB, and Device Status: Idle. On the right side of the header are buttons for Test, Save, Cancel, Reboot, and Logout. A vertical sidebar on the left contains various navigation icons. The main content area features two configuration panels:

- Discovery Setting**:
 - Multicast Address:
 - Time to Live:
 - Discovery Interval: seconds
- Lockdown Settings**:
 - Lock Down Mode:
 - Relay:

The footer of the page contains the text "CyberData • Support".

2.12 Autoprovisioning

Enabling autoprovisioning allows the device to download provisioning files from a server. It defaults to using DHCP, with options configured in dhcpd.conf on the DHCP server. The file name is <mac address>.xml and if not found, 000000cd.xml.

If a server is named, DHCP is bypassed, and the device will look for a file on the named server..

If a file is named, it will be downloaded instead of <mac address>.xml.

If a server is named, **Use tftp** searches for the file on a tftp server instead of http. If the server is secured (with a password), use **Verify Server Certificate** (username/password) to access it. When using DHCP, these options are configured in dhcpd.conf.

Autoprov autoupdate, **Autoprov at time**, and **Autoprov when idle** options are available with either DHCP or a named server.

The template is an xml file with all options set to default values.

Figure 2-21. Autoprovisioning Page

The screenshot displays the Autoprovisioning configuration interface. At the top, the device information includes Product: SIP Speaker, Serial: 394203569, Available Storage: 1380MB, and Device Status: Idle. The Autoprov Settings panel shows the following configuration:

- Autoprov: ENABLED
- Autoprov Server: [Text Field]
- Autoprov Filename: [Text Field]
- Use tftp: DISABLED
- Verify Server Certificate: DISABLED
- Username: [Text Field]
- Password: [Text Field]
- Autoprov autoupdate: 0 minutes
- Autoprov at time: [HHMM]
- Autoprov when idle: 0 minutes

A 'Download Template' button is located below the settings. The Autoprov Log panel shows the following log entries:

```

2024-11-06 15:21:42 Autoprov: no autoprov triggers. Exiting...
2024-11-06 15:21:47 Autoprovisioning on boot
2024-11-06 15:21:47 Autoprov found server='http://10.0.0.242' in dhcp option 43
2024-11-06 15:21:47 Autoprov looking for 0020f7057f4a.xml at http://10.0.0.242
2024-11-06 15:21:47 Autoprov downloading http://10.0.0.242/0020f7057f4a.xml
2024-11-06 15:21:47 Got autoprov file. Parsing "0020f7057f4a.xml"
2024-11-06 15:21:47 Autoprov: dialout failed to parse /tmp/0020f7057f4a.xml
2024-11-06 15:21:47 Autoprov: informcast failed to parse /tmp/0020f7057f4a.xml
2024-11-06 15:21:47 Autoprov: multicast failed to parse /tmp/0020f7057f4a.xml
    
```

2.13 Firmware

Note CyberData strongly recommends that you do not upgrade the firmware when the device is likely to be in use.

To upgrade the firmware of your device:

1. Download the latest firmware from the following CyberData web site, and locate your device:

<https://www.cyberdata.net/collections/sip>

2. Unzip the firmware version file. This file may contain the following:

- Firmware file
- Release notes
- Autoprovisioning template

 GENERAL ALERT	<p>Caution</p> <p>Equipment Hazard: Do not reboot the device. It will reboot automatically when the process is complete.</p>
----------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------

Figure 2-22. Firmware Page

The screenshot displays the CyberData web interface for a SIP Speaker device. The top navigation bar includes the CyberData logo and the following information: Product: SIP Speaker, Serial: 394203569, Available Storage: 1380MB, and Device Status: Idle. Action buttons for Test, Save, Cancel, Reboot, and Logout are visible on the right. The main content area is titled 'Firmware Settings' and shows the current Firmware Version as v22.0.0. Below this, there is a 'Choose File' button with the text 'No file chosen'. The page also features sections for 'Upload Progress', 'Upload Post Processing', and 'Status Messages', which currently displays 'Socket connected'.

2.14 Admin

Figure 2-23. Admin Page

The screenshot displays the CyberData Admin interface. At the top, it shows device information: Product: SIP Speaker, Firmware: v22.0.0, Serial: 394203569, MAC: 00:20:f7:05:7f:4a, Available Storage: 1380MB, and Device Status: Idle. Action buttons include Test, Save, Cancel, Reboot, and Logout.

The main content area is divided into several sections:

- Admin Settings:** Fields for Username (admin), Password, and Confirm Password.
- Logging Settings:** Debug Level (4), Log Network Traffic (OFF), and buttons for Get Application Log, Remove Application Log, Get Network Log, Remove Network Log, Get All Logs, and Remove All Logs.
- Configuration Settings:** Partition information (v22.0.0) and buttons for Restore Default Config, Restore Default Certificates, Import Config, Export Config, and Boot From Other Partition.
- Statistics:** Storage (1380MB), Boot Count (27), Reboot Count (23), and Uptime (up 4 minutes).
- Users List:** A table with columns for Username, Home, Device, Audio, Network, SIP, SSL, Multicast, Sensor, Strobe, Audiofiles, Events, Terminus, Autoprov, Firmware, and Admin. A user named 'audio' is listed with checkboxes for each feature and Edit/Delete buttons.
- Log Viewer:** A section for viewing logs with a Service dropdown (Application), Entries to get (250), Sort (Oldest), and a View Log button.

A footer at the bottom contains the text "CyberData • Support".

The administrator uses the Users List to create new accounts, assigning user names and passwords, and granting access to specific web pages.

2.15 Command Interface

Some functions on the device can be activated using simple POST commands to the web interface. The examples in [Table 2-2](#) use the free unix utility, **wget**, but any program that can send http POST commands to the device should work.

2.15.1 Command Interface Post Commands

These commands require an authenticated session (a valid username and password to work).

Table 2-2. Command Interface Post Commands

Device Action	HTTP Post Command ^a
Reboot	<code>wget --user admin --password admin --auth-no-challenge --quiet -O /dev/null --no-check-certificate "https://10.10.1.247/command" --post-data "request=reboot"</code>
Place call to extension (example: extension 600)	<code>wget --user admin --password admin --auth-no-challenge --quiet -O /dev/null --no-check-certificate "https://10.10.1.247/command" --post-data "request=call&extension=600"</code>
Terminate a call	<code>wget --user admin --password admin --auth-no-challenge --quiet -O /dev/null --no-check-certificate "https://10.10.1.247/command" --post-data "request=terminate"</code>
Speak IP Address	<code>wget --user admin --password admin --auth-no-challenge --quiet -O /dev/null --no-check-certificate "https://10.10.1.247/command" --post-data "request=speak_ip_address"</code>
Test Audio	<code>wget --user admin --password admin --auth-no-challenge --quiet -O /dev/null --no-check-certificate "https://10.10.1.247/command" --post-data "request=test_audio"</code>
Swap Boot partitions	<code>wget --user admin --password admin --auth-no-challenge --no-check-certificate --quiet -O /dev/null "https://10.10.1.81/command" --post-data "request=swap_boot_partition"</code>

a. Type and enter all of each http POST command on one line.

Appendix A: Troubleshooting/Technical Support

A.1 Contact Information

Contact CyberData Corporation
3 Justin Court
Monterey, CA 93940 USA
www.cyberdata.net
Phone: 831-373-2601
Fax: 831-373-4193

Sales Sales 831-373-2601, Extension 334

Technical Support The fastest way to get technical support for your VoIP product is to submit a VoIP Technical Support form at the following website:

<https://support.cyberdata.net/>

The Support Form initiates a ticket which CyberData uses for tracking customer requests. Most importantly, the Support Form tells us which PBX system and software version that you are using, the make and model of the switch, and other important information. This information is essential for troubleshooting. Please also include as much detail as possible in the **Comments** section of the Support Form.

Phone: (831) 373-2601, Extension 333

A.2 Warranty and RMA Information

The most recent warranty and RMA information is available at the following website address:

<https://support.cyberdata.net/>
