

What is a Night Ringer?

The Night Ringer extension is a second SIP extension specifically dedicated to ringing. Whereas the primary extension is used for two-way communication or voice paging, the Night Ringer simply rings, playing a user uploadable audio file signaling an incoming call.

CyberData SIP endpoints shown below come with two SIP extensions: one facilitates live paging, the other enables Night Ringer or Loud Ringer function.

Loud Ringer/Night Ringer Explained

For example, a car auto body shop could have **SIP IP66 Horns** mounted in the car bays to add additional ringing notification for an incoming call. With this configuration, if the attendants at the front desk are busy with a customer then a mechanic could answer the call. **The Night Ringer extension was designed with loud ringing in mind.**

It can be hard to determine which product is right for loud ringing and notification in a certain area, but this flow chart should help.

Products Shown:

- 011394 SIP Speaker
- 011216 SIP Office Ringer
- 011376 SIP Multi-Color Strobe
- 011457 SIP IP66 Outdoor Horn
- 011479 SIP Outdoor Multi-Color Strobe
- 011405 SIP Loudspeaker Amplifier (PoE)
- 011404 SIP Loudspeaker Amplifier (AC)
