CYBERDATA AND VODIA ANNOUNCE JUNE 30TH WEBINAR

Emphasis Will Be on Interoperability with CyberData SIP Endpoints and MS Teams

Burlington, MA, and Monterey, CA –23 June 2021: Vodia Networks ("Vodia"), manufacturer of cutting-edge software-based telephone systems, and CyberData, leader in designing, developing and manufacturing innovative SIP Endpoints for the SMB, healthcare, education and public/private sector and POS connectivity solutions, today announced their June 30th webinar.

The webinar, designed for both resellers and end-users, will demonstrate the seamless interoperability of the Vodia best-in-class cloud PBX with CyberData's best-in-class SIP endpoints and how the two companies' joint Microsoft Teams certification gives end-users more options and provides resellers and MSPs with an outstanding opportunity to grow their businesses.

Registration is available here: https://my.demio.com/ref/MxpZoXGX0OCGkDwl

"Vodia is a SIP PBX software compatible with Microsoft Teams – it can work as a single instance or as a multi-instance white label solution for small telecommunications operators, without the need for initial investment and with a business model based 100 percent on channel distribution," said Kyle Asbury, Director of Sales and Marketing for Vodia. "Together, in MS Teams environments, CyberData and Vodia consistently deliver on myriad customer requirements many manufacturers just can't, and we're going to explain how and why in our June 30th webinar."

"We were thrilled to complete the certification process with Vodia last year. This partnership with Vodia means Microsoft Teams customers have more options for paging and notification and resellers and MSPs have more opportunity to increase growth for their businesses," said Phil Lembo, President and CEO of CyberData. "The team at Vodia is dynamic, focused on delivering on customer requirements, and are truly a customer-focused organization. Customers and resellers benefit when organizations like ours can partner up to address their pain points and deliver a solution they can be happy with."

About CyberData
CyberData Corporation, based in Monterey, California, since its founding over 40 years ago, is a leader in designing, developing and manufacturing innovative SIP Endpoints for the SMB, healthcare, education and public/private sector and POS (Point of Sale) connectivity solutions.

CyberData sells through its distribution channel and offers custom end products through its OEM division. We develop and manufacture products that are known for quality, reliability, ease-of-use and durability.

CyberData Corporation complies with the terms of the Trade Agreements Act (TAA) found in section 52.225-5 of the Federal Acquisition Regulation.

About Vodia Networks
Vodia Networks has been a trendsetter in the Voice over Internet Protocol (VoIP) industry for over a decade. Since 2006, Vodia has led the VoIP world in innovation and forward-thinking development, particularly with its early adoption of a multi-tenancy platform for its channel partners – Vodia was the first company to offer a true multi-tenancy platform and it remains one of the very few companies that can deliver it. Vodia's multi-tenancy platforms are compatible with an unprecedented number of technologies, including desk phones, softphones and APIs for numerous third-party SW and CRM systems.
