

CyberData And Yealink Announce Validation: New SIP H.264 Video Intercoms Work On Yealink T58V Video Phone

Monterey, CA - CyberData and Yealink are pleased to announce that the CyberData SIP-enabled h.264 Video Outdoor Intercom p/n 011014 and Intercom with Keypad p/n 011414 have been formally validated with The Yealink T58V Video Phone.

Paul Tuttle Interop Manager at CyberData stated, “The Yealink T58V is a very versatile phone that integrates with the CyberData Video Intercom effortlessly. The phone provides crystal clear video and would be a great asset to any company that would want to introduce video door access control to their existing VoIP setup or as a point to point solution without the use of an IP PBX.”

CyberData, based in Monterey California, is a leading OEM design and manufacturing firm of IP Endpoints. With more than 40 years of experience specializing in IP Endpoints for the VoIP industry, our product line will enhance any VoIP phone system by addressing the needs for overhead paging, access control, loud ringers, bell schedulers, canned messages, visual notifications, and more.
