

CyberData Now Supports TLS 1.2

CyberData is pleased to announce we have begun implementing support of Transport Layer Security or “TLS” for enhanced security on our line of VoIP products.

CyberData devices now supporting TLS 1.2 include 011186 SIP Outdoor Intercom, 011214 SIP Outdoor Intercom w/Keypad, 011216 SIP Office Ringer and 011049 SIP Call Button.

We will continue to roll out TLS to all of our SIP endpoints in the coming weeks.

TLS is a cryptographic protocol that provides authentication and data encryption between servers, machines and IP endpoints over a network. This become increasingly important over a cloud based network.

SIP over TLS

- o Support for TLS v1.2, TLS v1.1, TLS v1.0
- o Support for server-side or mutual authentication

Auto-provisioning over TLS

- o Support for TLS v1.2, TLS v1.1, TLS v1.0
- o Support for server-side or mutual authentication

Rest assured when you see the CyberData logo, you can feel confident that data integrity is protected.
