

## **CyberData Corporation Releases SIP-enabled H.264 Video Intercom For Visual And Audio Two-Way Communication And Secure Access**

Security and Quality Drive CyberData's Development of SIP Video Intercoms

Monterey, CA – CyberData Corporation delivers one of their most exciting releases yet with their foray into video two-way communication, the *SIP-enabled Outdoor Video Intercom*. Available in a one-button and keypad version, both devices are perfect for secure access settings requiring video and two-way communication. This latest release from CyberData has excited many customers who have been clamoring for a cost-competitive video version of their very popular SIP-enabled Outdoor Intercom.

CyberData's *SIP-enabled Outdoor Video Intercom* increases the security of any VoIP installation and can integrate seamlessly into diverse settings such as schools and universities, nursing care facilities, SMB and enterprise as well as retail stores.

Users of CyberData's SIP-enabled IP endpoints can expect the same high quality in this newest release. "At this point, and after so many years of doing this, our customers are savvier and more knowledgeable about SIP and PoE powered devices. They're the ones that have consistently requested a high quality SIP-enabled Outdoor Video Intercom. Video quality and performance were driving factors for us during development and we spent an extensive amount of time due to the requests from our customers. Of course there was also internal pressure to maintain our high quality standards but still offer a cost-competitive device. We're very proud of the result and expect our customers will be very happy," said Phil Lembo, President and CEO of CyberData. "We continue to focus on security, which is becoming increasingly important and our energies will be on delivering additional security related products throughout the year," he continued.

CyberData will begin shipping the new SIP-enabled Outdoor Video Intercoms in April, and promises more releases throughout the year.
