

## CyberData Completes Interop Compatibility with Wildix, Global Leader in UCaaS

Monterey, CA – CyberData Corporation, developers of innovative SIP endpoints, announced the completion of testing and confirmed interop compatibility with Wildix, global leaders and makers of the first web-based UC&C system. This strategic alliance opens new and greater opportunities for both organizations, focused on growing the business of Wildix’s network of certified business partners and CyberData’s certified Resellers and Installers, and giving end user clients options when it comes to mass notification.

Since 2005, Wildix has been helping companies with 50 to 1000 users increase efficiency and streamline costs, while offering a tool that is always up-to-date, intuitive, and easy to use. With presence in 135 countries, and continued double-digit growth, Wildix offers their clients improved communications and secure-by-design systems. Wildix, with offices in the UK and US, places a great emphasis on fostering collaboration with their channel and offers a complete line of offerings that let employees stay focused on profitable activities, while saving time in routine operations.

“What’s so compelling about this alliance is that both of our organizations are remarkably similar when it comes to focusing on clients and fostering growth within the Reseller and Installer channel,” said Phil Lembo, President & CEO of CyberData. He continued, “Using CyberData endpoints to facilitate emergency paging or general announcements on the Wildix platform is easy. Equally important, Wildix focuses on showing their clients how they can save money and increase efficiency and it’s obvious that this focus has made them successful, especially when you look at their growth.”

CyberData’s SIP-enabled VoIP products are compatible with a vast majority of VoIP systems including SBCs, Gateways, and phone systems both on-premise or cloud-based. This interop with Wildix augments an extensive compatibility list. Configuration and set-up documentation for Wildix can be found on CyberData’s website here:
