

### Radio Design Labs FP-PA20A Power Amplifier

### SIP Paging Adapter Connections

#### Notes

CyberData SIP Paging Adapter's RCA line level output can connect to the LINE INPUT of a Radio Design Labs (RDL) FP-PA20A Power Amplifier as an unbalanced connection. Use a 2-conductor, shielded RCA cable terminated on one end with a male RCA connector. The other end should be stripped for connection to the FP-PA20A Power Amplifier. Short the negative terminal pin to the ground terminal pin on the FP-PA20A Power Amplifier's terminal block per the diagram.
